

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

REPORT

OF THE

Insurance Department

OF THE

STATE OF ILLINOIS.

PART I.

FIRE, MARINE AND INLAND INSURANCE.

**OFFICE OF INSURANCE SUPERINTENDENT,
SPRINGFIELD, ILLINOIS, March 18, 1911.**

To His Excellency, Charles S. Deneen, Governor of the State of Illinois:

SIR—The Act of June 20, 1893, creating the Insurance Department of the State of Illinois, directs the Insurance Superintendent to make report annually to the Governor of the affairs of such department. In compliance therewith this, Part I, of the report for 1910, is respectfully submitted. This is the eighteenth annual report made since the establishment of a separate insurance department, and the forty-third annual report relating to insurance issued in this State. It relates to matters pertaining to fire, marine and inland navigation insurance companies transacting this kind of business and covers the transactions of the department during the calendar year 1910.

Part II will deal with legal reserve life insurance companies.

Part III will deal with assessment life, fraternal societies and casualty companies, and matters pertaining to these several classes of business. They will be submitted in separate volumes for reasons of convenience.

This volume contains abstracts of the annual statements of the companies doing fire, marine and inland navigation insurance made to the department for the year ending Dec. 31, 1910, and which at this date are licensed to carry on their business in this State. These abstracts show in detail the financial condition of the respective companies. Statistical tables prepared from these statements are also presented herein. They show in form convenient for comparison and for statistical purposes the information contained in the statements relative to the financial condition of the companies and the business transacted and the results experienced during the year.

The companies doing a general fire, marine and inland navigation insurance business in this State at this date may be classified as follows, viz:

Illinois joint stock fire insurance companies.....	9
Illinois mutual fire insurance companies.....	14
Joint stock fire and marine insurance companies of other states.....	154
Foreign fire and marine insurance companies.....	55
Mutual fire insurance companies of other states.....	17
Total.....	249

This shows a net increase of sixteen in the number of authorized companies over the number included in the last report, as follows:

Illinois mutual fire insurance companies—Increase.....	1
Joint stock companies of other states—Increase.....	2
Foreign fire and marine insurance companies—Increase.....	11
Mutual fire insurance companies of other states—Increase.....	2
Total increase.....	16

The aggregate number of companies embraced in this part of the report is as follows:

Total number transacting a general fire and marine business.....	249
District mutual fire insurance companies.....	12
County mutual fire insurance companies.....	63
Township mutual fire insurance companies.....	142
District mutual windstorm and cyclone insurance companies.....	8
County mutual windstorm and cyclone insurance companies.....	4
Aggregate.....	478

Two new companies were incorporated in this State as mutual companies since the date of the last report. They are as follows:

Printing Trades Mutual Fire Insurance Company, December 6, 1910.
Quincy Mutual Fire Insurance Company, September 2, 1910.

Upon examination as required by the Act of March 11, 1869, these companies were found to have complied with the requirements of the law and were authorized to commence business on the dates mentioned.

Since the date of the last report companies from other states and foreign countries have been admitted to do business in this State as follows, viz:

Name of Company.	Location.	Capital.
American Union.....	Philadelphia, Pa.	\$ 500,000 00
Commonwealth.....	Dallas, Tex.	230,000 00
Consolidated Fire and Marine.....	Albert Lea, Minn.	200,000 00
Fidelity—Phenix.....	New York, N. Y.	2,500,000 00
Greenwich.....	New York, N. Y.	200,000 00
Hamilton.....	New York, N. Y.	200,004 00
Hawkeye and Des Moines.....	Des Moines, Ia.	200,000 00
Massachusetts Fire and Marine.....	Boston, Mass.	500,000 00
Merchants Fire Assurance Corp.	New York, N. Y.	200,000 00
National—Ben Franklin.....	Pittsburgh, Pa.	1,000,000 00
Osage.....	Topeka, Kan.	200,000 00
Standard.....	Hartford, Conn.	500,000 00
Union.....	Buffalo, N. Y.	200,000 00
United Firemen's.....	Philadelphia, Pa.	200,000 00
Abelle.....	Paris, France.	200,000 00
Balkan National.....	Sofia, Bulgaria.	200,000 00
General Fire Assurance.....	Paris, France.	201,000 00
National of France.....	Paris, France.	216,000 00
Northern of Russia.....	Moscow, Russia.	200,000 00
Phenix of France.....	Paris, France.	200,000 00
Standard Marine.....	Liverpool, England.	332,900 00
Swiss National.....	Basle, Switzerland.	200,000 00
Swiss Reinsurance.....	Zurich, Switzerland.	300,000 00
Union Fire.....	Paris, France.	310,000 00
Union and Phenix.....	Madrid, Spain.	300,000 00

The following named companies of other states have ceased doing business in this State since the date of the last report of this department, viz:

Name of Company.	Location.	License revoked.	Capital.
Ben Franklin.....	Pittsburgh, Pa.	Feb. 2, 1911	\$ 200,000 00
Farmers' and Merchants'.....	Lincoln, Neb.	Feb. 1, 1911	200,000 00
Fidelity.....	New York, N. Y.	Mar. 4, 1910	1,000,000 00
Freeholders.....	Topeka, Kan.	Sept. 1910	200,000 00
Hawkeye.....	Des Moines, Ia.	Jan. 26, 1911	100,000 00
National.....	Allegheny, Pa.	Feb. 2, 1911	500,000 00
Phenix.....	New York, N. Y.	Mar. 4, 1910	1,500,000 00
Queen City.....	Sioux Falls, S. Dak.	Mar. 1, 1911	200,000 00
St. Louis.....	St. Louis, Mo.	Mar. 18, 1911	200,000 00
Seaboard Fire and Marine.....	Galveston, Tex.	Mar. 1, 1911	250,000 00
Shawnee.....	Topeka, Kan.	Sept. 20, 1910	200,000 00
Standard.....	Keokuk, Ia.	Mar. 1, 1911	100,000 00

The aggregate capital stock and deposit capital of the stock and foreign companies doing business in this State at this date is \$10,253, 812.34 more than the aggregate capital of such companies at the date of the last report, as follows:

Increased capital, companies of this State.....	\$ 100,000 00	
Increased capital, companies of other states.....	4,505,200 00	
Increased deposit capital of foreign companies.....	981,400 00	
Capital of companies of other states admitted.....	6,830,004 00	
Deposit capital of foreign companies admitted.....	2,659,900 00	
Capital of companies of other states discontinued.....	\$4,764,191 66	\$15,076,504 00
Deposit capital of foreign companies discontinued.....	58,500 00	
		4,822,691 66
Net increase.....		\$10,253,812 34

A further comparison of the aggregate condition, and business in this State, of the companies authorized at the date of this report, with the condition and business of those authorized at the date of the last report, is as follows:

	1909	1910.	Increase.
Assets	\$ 536,832,370 48	\$ 585,959,129 79	\$49,126,759 31
Surplus	160,593,752 81	174,995,682 51	14,401,929 70
Impairment	136,903 65	432,420 26	295,516 61
Fire and marine losses incurred	10,379,412 65	11,711,308 63	1,331,895 98
Premiums received	22,614,386 48	23,216,674 89	602,288 41
Risks written	1,927,623,695 09	1,995,653,768 41	68,030,073 32

The following table shows the result of business in this State for the year 1910 as compared with the year previous:

	1909.	1910.
Fire risks written	\$1,778,804,044 09	\$1,853,261,576 41
Marine and inland risks written	148,819,651 00	142,392,192 00
Total	\$1,927,623,695 09	\$1,995,653,768 41
Premiums received on fire risks written	\$22,160,892 42	\$22,589,580 52
Premiums received on marine risks written	453,494 06	627,094 37
Total premiums	\$22,614,386 48	\$23,216,674 89
Fire, marine and inland losses incurred	\$10,379,412 65	\$11,711,218 63
Expenses estimated at 33 1/3 per cent	7,460,235 94	7,845,691 77
Total losses and expenses	17,839,648 59	19,556,910 40
Leaving an apparent profit of	\$4,774,737 89	\$3,659,764 49
Average premium rate of each \$100 insured	\$1 24	\$1 22
Amount of losses incurred on each \$100 insured	54	51
Amount of losses incurred on each \$1.00 of premiums received	46	43

Average premium rate on each \$100.00 insured in 1910: Stock fire, \$1.22; mutual fire, \$1.08; marine, \$0.44.

In 1909 the respective figures were: Stock fire, \$1.25; mutual fire, \$1.12; marine, \$0.30.

Amount of losses incurred on each \$100.00 insured in 1910: Stock fire, \$0.58; mutual fire, \$0.42; marine, \$0.23.

In 1909 the respective figures were: Stock fire, \$0.59; mutual fire, \$0.36; marine, \$0.14.

The amount of losses incurred on each \$1.00 of premiums received in 1910: Stock fire, \$0.59; mutual fire, \$0.38; marine, \$0.54.

In 1908 the respective figures were: Stock fire, \$0.42; mutual fire, \$0.32; marine, \$0.48.

Securities are on deposit in this department, held for the benefit and protection of all the United States policy holders of the company making the deposit, as follows:

Name of Company.	Location.	Kind of Securities Deposited.	Amount.
North German Fire.....	Hamburg, Germany...	U. S. 2 per cent bonds.....	\$200,000

The following is a statement of the securities deposited with the Insurance Superintendent for the benefit and security of the policy holders in this State of the companies making such deposit, under the reciprocal provisions, section 29 of the Act of March 11, 1869:

Name of Company.	Location.	Kine of Securities Deposited.	Amount.
Virginia Fire and Marine ..	Richmond, Va.....	U. S. 2 per cent bonds.....	\$13,000
Virginia State.....	Richmond, Va.....	Sanitary District 4 per cent bonds ...	10,900
Georgia Home.....	Columbus, Ga.....	U. S. 3 per cent bonds.....	10,000

Table No. 1 shows the amount and nature of the assets of the fire and marine insurance companies doing business in this State, as of Dec. 31, 1910, compared with 1909, and classified as follows:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 5,375,411 47	9	\$ 5,409,773 70
Joint stock companies of other states.....	152	407,214,018 48	154	440,371,271 50
Mutual companies of this State.....	13	2,663,733 75	14	2,750,910 43
Mutual companies of other states.....	15	6,428,936 61	17	10,439,902 53
Foreign companies.....	44	115,150,270 19	55	128,987,271 63
Total.....	233	\$536,332,370 48	249	\$585,959,129 79

Table No. 2 gives the amount of liabilities of the same companies excluding the capital stock, as compared with 1909:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 2,469,617 53	9	\$ 2,515,203 85
Joint stock companies of other states.....	152	208,954,192 82	154	225,837,007 82
Mutual companies of this State.....	13	1,135,649 11	14	1,181,407 07
Mutual companies of other states.....	15	3,131,597 10	17	5,648,225 95
Foreign companies.....	44	72,623,049 10	55	77,603,278 24
Total.....	233	\$288,314,105 66	249	\$312,785,122 93

The total amount of capital of joint stock and foreign companies is \$98,178,324.35, an increase from the previous year of \$10,253,812.34.

Table No. 3 presents a detailed statement of the cash income of the same companies, as compared with 1909:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 3,075,413 03	9	\$ 2,679,134 96
Joint stock companies of other states.....	152	226,596,769 70	154	236,381,144 22
Mutual companies of this State.....	13	1,683,697 59	14	1,806,062 41
Mutual companies of other states.....	15	5,364,430 14	17	7,788,645 93
Foreign companies.....	44	82,733,531 38	54	87,758,924 78
Total.....	233	\$319,453,841 84	248	\$336,392,812 30

Table No. 4 presents a detailed statement of the disbursements of the same companies, as compared with 1909:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 2,839,540 25	9	\$ 2,830,070 45
Joint stock companies of other states.....	152	192,641,762 23	154	208,862,786 33
Mutual companies of this State.....	13	1,508,196 60	13	1,693,137 52
Mutual companies of other states.....	15	4,962,008 04	17	6,868,653 92
Foreign companies.....	44	66,715,451 59	53	71,729,123 65
Total.....	233	\$267,666,958 71	246	\$291,983,671 87

The net excess of income over disbursements for 1910 was \$44,409,-140.43. Two hundred and fifteen companies received \$45,985,167.05 more than they disbursed, and thirty-one companies disbursed \$1,576,-026.62 more than they received.

These figures embrace both fire and marine business.

Table No. 5 shows paid up capital, admitted assets, total liabilities and surplus or impairment and per cent of surplus or impairment of capital; income and expenditures and per cent of expenditures to income; risks in force, net assets and the per cent of net assets to risks in force of such companies.

The surplus of companies as shown by this report and as compared with 1909 is as follows, viz:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 1,005,793 94	8	\$ 896,945 05
Joint stock companies of other states.....	151	126,026,248 53	150	135,872,695 73
Mutual companies of this State.....	13	1,528,084 64	14	1,669,603 36
Mutual companies of other states.....	15	3,297,339 51	17	4,791,676 68
Foreign companies.....	40	28,873,189 84	51	32,297,282 05
Total.....	228	\$160,730,666 46	240	\$175,428,102 77

The impairment of companies, as compared with 1909, is as follows, viz:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	1	\$ 489 55	1	\$ 2,375 20
Joint stock companies of other states.....	4	136,414 10	4	143,511 05
Foreign companies.....	4	136,414 10	4	286,534 01
Total.....	5	\$136,903 65	9	\$432,420 26

The per cent of losses resisted to losses paid, as compared with 1909, is as follows, viz:

	1909.	1910.
Joint stock companies of this State.....	1.13	1.47
Joint stock companies of other states.....	1.71	4.82
Mutual companies of this State.....	1.17	1.42
Mutual companies of other states.....	.31	.61
Foreign companies.....	3.66	1.87
Average.....	2.21	3.91

Risks in force at the close of the year 1910, as compared with the close of the year 1909, show as follows:

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 328,095,242 00	9	\$ 301,311,487 00
Joint stock companies of other states.....	151	30,077,175,340 11	153	32,422,785,036 32
Mutual companies of this State.....	13	148,586,947 85	14	159,838,479 92
Mutual companies of other states.....	15	498,135,235 89	17	883,396,586 35
Foreign companies.....	44	10,696,331,849 85	51	11,686,981,371 00
Total.....	232	\$41,748,324,615 70	244	\$45,454,313,260 59

An increase for 1910 of \$3,705,988,644.89.

Amount of net assets possessed for each \$100.00 insured, as compared with the close of 1909, show as follows, viz:

	1909.	1910.
Joint stock companies of this State.....	\$1 52	\$1 64
Joint stock companies of other states.....	1 23	1 24
*Mutual companies of this State.....	4 53	4 40
*Mutual companies of other states.....	5 42	3 64
Foreign companies.....	95	96
Average.....	\$1 22	\$1 23

* Including deposit notes and contingent liability of members.

Table No. 6 shows the companies which have special deposits in other states for the exclusive protection of policy holders therein; the amount of such deposits and the liabilities secured thereby not included in the tables above referred to. The special deposits of the several companies should be added to the last column in Table No. 1 in order to show the gross assets of the companies. The liabilities secured by such special deposits should be added to the sixth column of Table No. 2 in order to show the gross liabilities of the companies.

Table No. 7 shows the amount of fire business done in Illinois during the year 1910, also the amount of marine business separately, as compared with 1909, and classified as follows, viz:

FIRE RISKS WRITTEN.

	No.	1909.	No.	1910.
Joint stock companies of this State.....	9	\$ 42,969,181 00	9	\$ 5,562,595 00
Joint stock companies of other states.....	147	1,250,126,344 16	148	1,318,093,008 77
Mutual companies of this State.....	13	22,571,654 11	14	36,061,350 57

Tables numbered 9 and 10 show the aggregate business done in this State by all companies for each year since 1869, together with the estimated profit or loss on the entire business for each respective year.

Table No. 11 presents a comparison of the losses paid during 1910 and the losses resisted on Dec. 31, 1910, by each company reporting to this department at this date.

Tables numbered 12, 13, 14, 15 and 16 relate to district, county and township mutual fire insurance companies transacting a local business, and give the name and location of such companies, their condition Dec. 31, 1910, the business transacted by them during the year 1910 as disclosed by their annual statements filed in the department, and the aggregate of this class of business for each year since 1873.

Tables numbered 17, 18, 19, 20, 21, 22 and 23 give similar information respecting the county and the district mutual wind storm and cyclone insurance companies, which also do a local business only.

BUSINESS OF 1909 AND 1910 COMPARED.

GENERAL REMARKS.

The combined figures from the statements of all the companies, other than the district, county and township mutuals, reporting to this department show that while in 1909 the companies paid losses equaling 36 cents on each \$100.00 of risks in force at the end of the year, in 1910 the losses paid during that year equaled 34 cents on each \$100.00 of risks in force.

In 1909 the losses paid equaled 41 cents on each \$1.00 of premiums received, while in 1910 they equaled 49 cents on each \$1.00.

During 1910 the amount of premiums received by all companies was 6 per cent more than the premiums received in 1909, while the amount of losses paid during the year was 9 per cent more than the amount paid in 1909.

The aggregate capital of all the companies included in this report is \$10,253,812.34 in excess of the amount of the capital of the companies as shown in the last report.

The amount of total admitted assets shows an increase of \$49,126,759.31, and the total surplus of assets over all liabilities an increase of \$14,401,929.70.

The excess of income over disbursements of all companies during 1910 was \$44,409,140.43, as against excess of income of \$51,786,883.13 in 1909.

It is to be noted in this connection that the number of companies included in this report are sixteen more than the number included in the last report.

The net surplus of all joint stock and foreign companies was shown in the last report to be 182.80 per cent of capital, while this year it is shown to be 178.25 per cent of capital.

The total income of all the joint stock foreign and mutual companies doing a general business was \$336,392,812.30 during 1910, of which \$308,883,279.70 was received from premiums. Of this amount they expended for losses 45.77 per cent of total income, or 49.85 per cent of total premiums. For expenses, 36.29 per cent of total income, or 39.53 per cent of premiums. For dividends to stockholders of stock companies and policy holders of mutual companies, 4.73 per cent of total income, or 5.15 per cent of premiums. The following table is of interest as showing the percentages for the past six years:

	1905.	1906.	1907.	1908.	1909.	1910.
Percentages of premiums to total income.....	92.77	89.59	98.04	92.17	91.02	91.82
Percentages of losses to total income.....	44.75	84.49	43.59	50.63	43.85	45.77
Percentages of losses to premiums received.....	48.24	94.30	46.85	54.93	48.16	49.85
Percentages of expenses to total income.....	34.13	34.71	40.87	36.99	39.62	36.29
Percentages of expenses to premiums received.....	36.79	38.74	43.87	40.05	43.51	39.53

The above figures and percentages are based on the combined figures of both fire and marine business. Dividends are excluded in computing expenses, and commissions are included.

The amount of insurance reported written in this State during 1910 by the companies included herein was \$1,995,653,768.41, being \$68,030,-073.32 in excess of the amount written in 1909.

The total premiums received on business in this State by all the companies reporting, amounts to \$23,216,674.89, which is \$602,288.41 in excess of the amount reported as received during 1909.

The total amount of losses incurred in this State is shown to be \$11,711,218.63, which is \$1,331,805.98 more than the amount reported as incurred during 1909.

Computing the expenses of conducting the business at $33\frac{1}{3}$ per cent of premiums received, there is shown to have been an apparent profit of \$3,659,764.49 to companies on their business in this State during 1910. The profit on the same basis, shown on the business of 1909, was \$4,774,737.89. The average premium rate charged on fire business in this State last year was \$1.22 on each \$100.00 of risks written. The average premium rate shown for 1909 was \$1.24. The ratio of losses incurred was 59 cents on each \$100.00 of risks written and 50 cents on each \$100.00 of premiums received. The corresponding ratios were 54 cents and 46 cents respectively for 1909.

EXAMINATIONS.

Since the date of the last report, examinations have been made of the following named fire insurance companies, either in the matter of incorporation, upon application for admission, or to ascertain their financial condition:

Calumet Insurance Co., Chicago, Illinois.
 American National Fire, Rockford, Illinois.
 Bohemian Mutual Fire, Chicago, Illinois.
 Coal Operators' Mutual Fire, Springfield, Illinois.
 Central National Fire, Chicago, Illinois.
 Federal Union Fire, Chicago, Illinois.
 Forest City Fire, Rockford, Illinois.
 German Fire, Peoria, Illinois.
 Illinois Mutual Fire Underwriters, Belvidere, Illinois.
 Insurance Company of State of Illinois, Rockford, Illinois.
 Metropolitan Fire, Chicago, Illinois.
 Millers Mutual Fire Association, Alton, Illinois.
 Mill Owners Mutual Fire, Chicago, Illinois.
 National Mutual Church Fire, Chicago, Illinois.
 Protective Mutual Fire, Chicago, Illinois.
 Prussian National of Germany, Chicago, Illinois.
 Retail Merchants Association, Springfield, Illinois.
 Sovereign Fire of Canada, Chicago, Illinois.

During the past year this State has made an important contribution to fire insurance literature by the report of the Illinois Fire Insurance Commission, and the investigation by the Commission and the report of its conclusions mark an epoch in the evolution of fire underwriting, because it is the pioneer effort of this character.

The Commission was appointed by the Governor, pursuant to a joint resolution of the Forty-sixth General Assembly, and during nearly two years' investigation, held numerous meetings and examined a large number of witnesses.

The report made Jan. 4, 1911, to the present General Assembly is a very well considered discussion of various insurance problems and their relation to the State, and the recommendations, while conservative, are along lines which in actual operation would lead to marked and permanent improvement in fire insurance conditions.

The report has been very widely circulated, and it is likely that no fire insurance literature of recent years has been in greater demand, and the comments from the press and public have been very commendatory.

The conservative Massachusetts Insurance Department, speaking through its able and experienced commissioner, Hon. Frank H. Hardison, says of the report:

I have read the report with a great deal of interest, and I think its conclusions are warranted and that it is the best statement by far of the conditions relating to the business.

The commission's recommendations are sound and I shall be very glad to receive copies of the bills which will be presented for carrying out these recommendations.

A great number of state departments, insurance companies, insurers and others interested in the subject of fire insurance, have added their testimony to the value of the work of the Commission.

The recommendations in the report give special emphasis to the necessity for some State action to check the fire waste and improve the building conditions and inspection.

Three bills were reported as follows:

1. Amending the present surplus line law by adding a proper penalty clause.
2. Providing for State control and regulation of all the fire underwriting activities at present unlicensed and without supervision.
3. A law against rebating by agents or brokers and against violation by insurance companies of their own schedules or schemes of rate making.

The Commission declared against State made rates, announcing the doctrine that the power to make rates for fire insurance should remain with the insurance company, but that such rates and the schedules or other rate-making machinery, by which rates are determined, should be accessible to the State Insurance Department for the purpose of determining questions of discrimination.

The theory upon which the report of the Commission proceeds is that fire insurance is a tax which should be fairly distributed according to hazard and that the State should have authority to enforce such a distribution.

Bills were reported, covering these recommendations and subsequently were introduced in the General Assembly, where they are now under consideration. The Insurance Department rendered the Fire Commission such assistance and coöperation as was possible during the course of its investigation.

The General Assembly, and indeed the State of Illinois, is to be congratulated upon the fact that in dealing with a matter of such very large and general interest as fire insurance, investigation preceded action, and I am very certain that a similar course of procedure in all states would avoid the discomfiture of unconstitutional acts or the calamity of ill-advised and radical restrictive legislation.

During the year 1910 the New York legislature appointed a commission, similar to that of Illinois, for the purpose of investigating fire insurance conditions and practices.

They have recently made a very complete and instructive report which fully endorses the findings and conclusions of the Illinois Commission, declaring against state rating and kindred restrictive measures which are proposed in some states and are already upon the statute books in a few others.

I call attention to these reports at some length, because of their importance and educational value, and especially for the reason that both the Illinois and New York Commissions place great emphasis upon the proposition that the only real reform which will certainly lead to lower fire insurance rates is the reduction of fire waste and permanent and radical improvement of those conditions, physical and otherwise, which make the fire waste not only possible, but inevitable.

If the legislatures of many of the states would devote half the time and energy to the fire waste, its cause and cure, they now bestow upon ill-advised and burdensome restrictions for fire insurance companies, the question of lower fire rates and better insurance conditions would be speedily and permanently settled.

The Forty-sixth General Assembly passed the fire marshal law but made no appropriation of funds paid in by the insurance companies for the support of the offices, therefore the fire marshal has not been able to proceed with any organization nor to render any efficient service.

The office is supported by a tax of one-half of one per cent upon premiums of fire insurance companies, which has been paid and only needs the action of the General Assembly to be available.

A bill is now under consideration in the Legislature providing for this appropriation and it should certainly have a speedy and favorable action.

Considerations of public policy demand that not only Illinois but all states should inaugurate and diligently prosecute a campaign for the reduction of fire waste and the betterment of these conditions which make that waste possible.

The capital invested in the fire insurance business is not substantially larger than it was thirty years ago. The facilities have not kept pace with the necessities of the insuring public. The legislatures of all states should direct their attention to such changes in insurance conditions, tax laws and supervisory regulations as will encourage the investment of capital in fire insurance enterprises.

The relation of the whole business of fire underwriting to the State should be considered in a broad and liberal manner so as to furnish the largest opportunity to both the insurer and the insured, consistent with safety and solvency.

TABLE No. 1.

Detailed Statement of Assets of Each Fire and Fire Marine Insurance Company Complying with the Insurance Laws of Illinois, as Shown by Their Annual Statements, for the Year Ending Dec. 31, 1910.

I. JOINT STOCK COMPANIES OF THIS STATE.

RE-TRADERS INSURANCE COMPANY.

ESTABLISHED 1879,

STATE BANK OF CHICAGO.

CAPITAL, \$1,500,000; SURPLUS, \$1,500,000.

S. E. Cor. LaSalle and Washington Sts.

CHICAGO, February 17, 1911.

Mr. Fred W. Potter, Insurance Superintendent, Springfield, Ill.:

DEAR SIR—We have for acknowledgment yours of the 15th inst. The affairs of this Company are now being wound up. We are drawing checks for final dividend in the sum of 9.90 per cent and the same will be distributed in a short while.

There was a court order entered on the 11th inst. authorizing this payment. The term of court expires on the 19th inst. and unless appeal is taken the dividend above referred to will be paid and the estate closed. This makes a total of 74.90 per cent.

Yours very truly,

W. C. MILLER,

Assistant Secretary.

Commission Report.

THE ILLINOIS FIRE INSURANCE COMMISSION REPORT.

SPRINGFIELD, ILLINOIS, January 4, 1911.

To the Senate and House of Representatives, Forty-seventh General Assembly of the State of Illinois:

Pursuant to the resolution of the Forty-sixth General Assembly, providing for the appointment of this commission, Hon. Charles S. Deneen, Governor, appointed as its members, E. W. Lyman, Chicago; E. A. Hall, Springfield; Carl Hellpenstell, Rock Island; S. D. Sexton, East St. Louis, and George C. Gill, Quincy.

The resolution under which the appointment was made is as follows:

"FIRE INSURANCE COMMISSION.

(SENATE JOINT RESOLUTION NO. 24.)

"WHEREAS, The fire insurance laws of Illinois make no provision whatever as to what rates the fire companies shall charge for business procured in this State, the question of rates being one entirely with the companies or bureaus and there being no officer in this State who has any authority as to making or changing fire insurance rates; and,

"WHEREAS, The fixing of the classification of municipalities and physical conditions of properties as a basis for fire insurance rates in Illinois, is also a matter entirely in private hands and not subject to appeal to any public official authority; therefore, be it

"Resolved, by the Senate, the House of Representatives concurring herein, That the Governor is hereby authorized and requested to appoint a commission consisting of five competent and disinterested citizens of Illinois, whose duty it shall be to obtain information and report to this General Assembly their judgment as to the advisability of enacting a law regulating fire insurance rates in this State.

"One of said commissioners shall be selected from the city of Chicago, one from Rock Island, one from Springfield, one from East St. Louis and one from Quincy.

"Said commissioners shall have power to subpoena and compel witnesses to attend and testify and to compel the production of all documents, exhibits or other information the commission may deem needful for the correct discharge of their duties and to the extent of making penalties for false testimony applicable, the hearing of the commission shall be a judicial hearing.

"Said commission shall be appointed immediately upon the joint adoption of this preamble and resolution, and thereupon said commission shall at once assemble and begin and continue their hearings at such time and place as the commission may determine.

"The members of said commission shall be allowed their actual expenses only, the same to be certified by the commissioners under oath, to the Governor, who shall thereupon recommend to the General Assembly to make an appropriation covering such expenses.

"The commissioners shall file their report with the General Assembly not later than May 1, A. D. 1909.

"In the event that said commissioners recommend the enactment of a law regulating fire insurance rates in Illinois, the commissioners shall submit with their report the draft of the bill whose basic plan and object shall be just and reasonable regulation of fire insurance rates with the least amount of official machinery and the lowest amount of public cost that would give the largest measure of justice and equity with the simplest and easiest local application.

"Adopted by the Senate March 23, 1909.

"Concurred in by the House April 22, 1909."

The sum of five thousand dollars was appropriated for the expense of the commission by Act of the General Assembly:

"An Act to appropriate the sum of five thousand dollars to pay for the services and expenses of the commission appointed under and pursuant to Senate Joint Resolution No. 24, to obtain information and report to the General Assembly their judgment as to the advisability of enacting a law regulating fire insurance rates in this State, and to pay for other expenses connected with their investigation, and extending the time for the report of said commission.

"Section 1. *Be it enacted by the People of the State of Illinois, represented in the General Assembly:* That five thousand dollars, or so much thereof as may be necessary, is hereby appropriated to pay for the expenses and services of the commission appointed under and pursuant to Senate Joint Resolution No. 24, to obtain information and report to the General Assembly their judgment as to the advisability of enacting a law regulating fire insurance rates in this State, and to pay for other expenses connected with their investigation, including the services and expenses of a stenographer, and for the expenses attending the subpoenaing and compelling the attendance of witnesses, the production of documents, exhibits and other information and including also the fees and mileage of such witnesses, which shall be the same as allowed in courts of record: *Provided*, that the members of said commission shall each receive the sum of \$15.00 and no more for each day occupied in said investigation, said \$15.00 to cover both their services and expenses.

"Section 2. The Auditor of Public Accounts is hereby authorized to draw his warrant upon the State Treasurer for the sum hereby specified, or any part thereof, upon the presentation of the proper voucher or vouchers signed by the Governor, and the Treasurer shall pay the same out of the money hereby appropriated.

"Section 3. Said commission shall file its report on the first day of the session of the next General Assembly, in both houses.

"Approved June 9, 1909."

The commission met at Springfield, Illinois, on the 26th day of April, 1909, in executive session, for the purpose of organization and consideration of the work as outlined in the resolution. This meeting extended over a period of two days. At the first day's session Mr. E. W. Lyman was elected president and Mr. George C. Gill secretary. The remainder of the sessions of this meeting were occupied by discussion and a review of the scope and character of investigation, the nature of the testimony desirable and the persons from whom it could be obtained. At an early session of the commission it was determined that no permanent or valuable results could be expected unless the investigation was of a character so comprehensive that, when completed, the record should show at least the most important features of the relation of the fire insurance business to the insuring public.

The most important expression of this relation is found in the rate paid for insurance, and it is to this important factor that the resolution of the General Assembly refers and with which the commission is called upon to deal. The importance of the business of fire insurance to the people of Illinois need not here be discussed, but that a general idea of the magnitude of the business may become a part of this report and thereby perhaps be better understood and appreciated, it may be suggested that the total amount of fire insurance written in the United States for the year 1909, so far as reported to the departments of the several states, was \$33,117,668,129.00 at risk, for which was paid a premium of \$262,196,532.00. These figures are taken from a summary of the reports made to the insurance departments of the several states for the year ending December 31, 1909, and are believed to be accurate, so far as they include licensed companies. It should be remembered, however, that operating in nearly every state were a great number of Lloyds, inter-insurers, reciprocal and individual underwriters, unlicensed mutuals, and other kindred varieties of underwriting activity, all of which make no reports and furnish no available statistics to the states. A conservative estimate indicates that these forms of insurance activity supply at least 20 per cent of the total indemnity purchased by the American public.

In Illinois the amount of insurance written during the year 1909 was \$1,778,804,044.00 at risk, for which was paid a premium of \$22,160,892.00.

Statistical information filed with the commission shows that the average rate paid for fire insurance in the United States for the year 1909 was 1.123, or \$11.23 per \$1,000.00 of insurance, and that in Illinois the average rate for the same year was 1.22, or \$12.20 per \$1,000.00 of insurance.

It will be observed that the average rate of the State of Illinois was 10 cents higher than the average rate of the entire country, thirty-six states having a higher average rate and ten states a lower average rate.

At a proper time in this report will be discussed some of the conditions, physical and otherwise, which contribute to rates and premium charges, and the reasons for these rates and for differences in various parts of the country, and these differences and their causes will be compared, and so far as appears necessary, accounted for.

For the purpose of giving to the meetings of this commission the widest possible publicity and affording to all interests ample opportunity for a hearing, it was determined that the first meeting of the commission should take place in the city of Quincy, Illinois, in response to an invitation from the officials of the Chamber of Commerce of that city, and that there should be held meetings in other towns and cities of the State, as might thereafter be thought advisable.

The commission approached the work of taking testimony and preparing a record upon which this report might be based with a considerable degree of hesitation and a full knowledge of the fact that the subject of fire insurance has occupied the best thought and attention of some of the ablest minds of the country for a century or more, and that the problem of a strictly mathematical apportionment of the premiums paid to indemnity sold has been one which underwriters themselves have frankly admitted that they were unable to solve. There are, however, possibilities in this direction not available to the insurance companies themselves, under existing limitations to which these companies are subjected by law and by the various forms of underwriting competition arising from the multiplicity of theories and plans of operation, devised by underwriting ingenuity under the spur of unrestrained competition.

The commission has conducted its investigation not alone from the standpoint of the insurance buyer, but from that of the insurance seller. The business of fire insurance is of such commercial importance that it ranks with banking, railway, express and telegraph service, and public interests demand that any legislation proposed should preserve the institution and increase its usefulness, rather than impair its capacity for efficient public

service. We have, therefore, called upon company managers and officers with great freedom, and our requests for data and information have met with prompt and intelligent response from underwriters as well as the public generally. This assistance has been of great benefit, because the greater part of the information required was of necessity in the hands of the companies, and is of much more value prepared and furnished voluntarily than if drawn out by the tedious process of cross examining unwilling or reluctant witnesses.

The final settlement of the questions referred to the commission must of necessity depend upon the testimony of experts. The fire insurance business is highly technical in its nature, and the testimony of those who have had no experience in the business can at best be little more than expressions of opinion, based upon comparisons between individual risks and conditions local in their application.

The problem of the proper adjustment of the fire rate to fire hazard is not local, but general. That testimony is of necessity most valuable which sheds most light upon the general situation embracing the entire field of insurance activity. In the formulation of this report, therefore, two considerations are constantly kept in mind:

First—The purpose of any recommendation made or regulation proposed is the preservation and increased efficiency of the business, in rendering the character of service which the public welfare demands, the recommendations of this commission being designed only to secure equity in the apportionment of the insurance charge without favoritism.

Second—For the purpose of this report we adopt the theory that the fire insurance rate is a tax, levied and collected by private enterprise, but still economically a tax and to be treated as such.

It has come to be generally conceded that fire indemnity is not merchandise to be bought and sold in the open market, as flour or lumber, subject to the exigencies of trade and competition, but a public service, and as such subject to proper regulation, and at the same time that it is entitled to reasonable protection.

Regulation without protection would be such tyranny as would be abhorrent to an enlightened people. This position is sustained by all underwriters and authorities, so far as we are advised, and has not been questioned from the witness stand or otherwise during the progress of our investigation.

The Commission has undertaken its work in the hope, at least, that by listening to the opinion of all persons interested in any way in this many-sided and important activity some light might be shed in the report, some information furnished, and some solution proposed which might reduce the inequalities arising from the practical transaction of the business, and possibly some suggestion made which would be helpful and finally crystallize into statutory enactment, which would make for better and cheaper fire insurance for the people of the State of Illinois.

Since the Commission was appointed it has held fifteen sessions and has caused to be examined eighty witnesses. At the several sessions and during the examination of witnesses there have been filed a great number of books, pamphlets, reports and other documentary evidence, all of which is filed with the testimony and included as a part thereof.

The Commission attaches hereto and makes a part of this report as Appendix "A" the name, post office address and occupation of each of the witnesses examined, and as Appendix "B" a list of all the books, pamphlets and other documentary evidence produced in the course of examination of witnesses.

The witnesses appearing before the Commission were all examined under oath, and the testimony consists of three volumes, numbered 1, 2, and 3, which are filed herewith and to which reference will be made from time to time as appears necessary.

The conclusions, opinions and recommendations contained in this report are believed to be warranted by the facts and conditions as they exist and

have proper foundation in the testimony which has been taken before the Commission. The dates and places of meeting and the time spent at each meeting will be found in Appendix "C" hereto attached.

There was an appropriation by the General Assembly of \$5,000.00 for the expenses of the Commission, and a complete statement of such expenses is made a part of this report, marked Appendix "D."

The preamble and first clause of the resolution under which this Commission was appointed contains two recitations, which are as follows:

"WHEREAS, The fire insurance laws of Illinois make no provision whatever as to what rates the fire companies shall charge for business procured in this State, the question of rates being one entirely with the companies or bureaus, and there being no officer in this State who has any authority as to making or changing fire insurance rates; and,

"WHEREAS, The fixing of the classifications of municipalities and physical conditions of properties as a basis for fire insurance rates in Illinois is also a matter entirely in private hands and not subject to appeal to any public official authority; therefore, be it

"Resolved, by the Senate, the House of Representatives concurring herein, That the Governor is hereby authorized and requested to appoint a commission consisting of five competent and disinterested citizens of Illinois, whose duty it shall be to obtain information and to report to this General Assembly their judgment as to the advisability of enacting a law regulating fire insurance rates in this State."

Under this resolution it was clearly the duty of the Commission to make a reasonably careful and exhaustive examination of fire insurance and its relations to the insuring public, and to this end we have listened to the testimony of a great number of insurers, large and small, in the various parts of the State, and to a great number of insurance agents, managers and company officials, so that we have in the record some view-point from an authoritative source of nearly every angle of fire insurance.

Without an investigation of this kind no conclusion which would be intelligent or in any way beneficial would be possible, nor do we think that simply a report of what has been done with our conclusions, sufficient under the circumstances to constitute what we conceive to be a complete discharge of our duties under the resolution by which we were appointed.

It does not seem proper at this time to submit the testimony taken with a simple recommendation, but if we are to make our final recommendations as intelligible as possible, it appears necessary to enter upon some discussion of insurance conditions and of the reasons which led the Commission to the conclusions hereafter announced, as well as to the recommendations which form a part of this report.

It must also be kept constantly in mind, that a report such as this is designed to be, while it must to some extent deal with the details or particulars of the business, should have for its chief purpose a consideration or survey of the whole field of fire insurance activity.

Fire insurance, as we notice elsewhere, is one of the important economic factors in our civilization, and as such, should be treated in a broad way and its relation to the State broadly defined.

If, therefore, this report should at any time contain expressions commendatory of any branch or variety of the business, or emphasize the economic importance of some system of transacting the business in comparison with others, such expressions must not be construed necessarily as criticism, but as the result only of what appears to follow naturally from our testimony.

The State, in the final analysis, has and should have the right to say by what agencies its economic necessities are to be served, and if it should be discovered that some variety of the insurance business is not performing its proper function, why should it not be either reformed or eliminated?

We conceive it our duty, as far as possible, to examine the various methods of conducting the fire insurance business and their relation to the State, the insurance public, and to here report our conclusions perhaps critically, but in no spirit of condemnation or unkindness.

Existing conditions, whether good or evil, are part of our commercial evolution; to be accepted as facts, and discussed fairly and impartially.

The Commission attempts simply to show the economic relation of each variety of underwriting activity to the State, and if in this analysis, it appears that some form of the business serves the economic need better than others, the facts are to blame, not the Commission.

The most important, indeed the controlling factor in determining the fire rate and its apportionment to indemnity furnished is of course fire waste, and the reduction of this waste is a problem which now seems to be perplexing not only the insurance companies, but State officials and the people generally, who have come to regard it as one, if not the most important factor in the national waste which is now agitating the public mind. The subject of fire waste is now attracting more attention from the press and public at large than ever before in our history.

The United States destroys or permits to be destroyed by fire more property than any civilized country, and our national fire losses, in proportion to our insurable values, are from six to twenty times those of any European nation. From a recent report of the United States Geological Survey Bureau, entitled, "The Fire Tax and Waste of Structural Materials in the United States," it appears the actual fire losses in the United States through destruction of buildings and their contents, in the year 1907 amounted to \$215,084,709.00, or \$2.51 per capita. The per capita loss in the six leading cities of Europe averaged during the same year but 33 cents. A comparison shows that if the buildings in the United States were as nearly fireproof as in Europe, the annual fire loss would be reduced to about one-fifth of its present volume. Fire waste, however, does not concern itself exclusively with property, for it is estimated that in the United States fifteen hundred people are killed and five thousand injured annually as a direct result of fire.

These figures are significant and are quoted chiefly for the purpose of attracting attention to the magnitude and complexity of the problems found in the active transaction of fire insurance. We find from the testimony of a number of witnesses who have personal knowledge of building conditions in Europe and elsewhere that construction in those countries is almost exclusively of stone or some other fire-proof material; that police regulation, building supervision and punishment for incendiarism are far more thorough than in this country—indeed, are probably far more drastic than our people would be willing to endure.

Some interesting statistical data will be found in the testimony of Mr. J. D. Browne, President of the Connecticut Fire Insurance Company (vol. 3, p. 464). This witness collected and produced before the Commission certain facts relating to the construction of a number of the principal European cities, with an account of the number of fires annually, the methods of their investigation, and the administration of laws and ordinances upon the subject. One city will serve as an illustration.

"VIENNA, population 795,787. No wooden buildings. There is no known case in this city where a conflagration has extended beyond the building in which it originated, and few cases are known where it has extended beyond the floor where it originated. This is accounted for by the solidity of the building, the strict fire regulations and a fairly good fire department.

"One provision of Section 46, Fire Regulations, runs as follows: 'After every fire the police authorities, together with the chief of the fire department, are obliged to make a thorough investigation as to the beginning, extension and effect of the fire and as to the cause and eventually as to guilty persons.'"

In many European countries the tenant is responsible to his landlord and to his neighbors for any carelessness in the use of the property he occupies which results in fire. In other words, the person whose negligence causes a fire under no circumstances may profit by it, and in addition may be penalized, if the conditions appear to warrant a penalty. The enforcement of strict building supervision, police regulation and personal responsibility without doubt accounts in a large measure for the otherwise incredible

difference between fire waste in Europe and the United States. For instance, Berlin has a population larger than Chicago, and during recent years has grown with equal rapidity. The annual fire loss of Chicago may be said to approximate five million dollars, while the annual fire loss of Berlin rarely exceeds one hundred fifty thousand dollars. In the older European countries lath and plaster partitions, concealed places in floors and walls and generally flimsy, or, as we term it, quick-burning construction, are things unknown. The mixed character of our population, the wonderfully rapid growth of our cities and the general disregard for law and public safety are all factors which preclude conditions easily maintained in the older countries.

The premiums received by licensed fire companies in the United States for ten years ending January 1st, 1908, were \$1,982,122,000.00, and the losses for the same period were \$1,170,801,000.00. The expenses were \$687,642,000.00, making a total for losses and expenses of \$1,868,425,000.00. The difference between the total income and outgo of the business for this ten-year period is only \$113,727,000.00, and if the increase in the unearned premium reserve is taken into account these figures show that for the ten-year period mentioned there was no underwriting profit on the business as a whole. Again, if we take similar statistics for any ten-year period since statistics have been kept in the business, we are unable to find any period where the aggregate net profits have exceeded about 3 per cent, while as will later be shown, during the past ten years in the United States, instead of being a net profit there has been a net loss on the aggregate sales of fire indemnity.

It should be remembered that the aggregate profits or losses referred to are purely profits or losses on the thing sold, namely, fire indemnity as embodied in the policies issued, and that in most States the printed conditions of these policies are prescribed by law; but the stock fire company has two sources of income:

First—Net profits on the indemnity sold as above indicated.

Second—Interest on the company's assets. This interest is divisible into two parts, namely, interest on the funds paid in by policy holders which have not yet been earned either by payment of loss or by expiration of policies. This fund, known as the unearned premium reserve, is maintained by every company under the statutory requirements of the several States in which it transacts business. Taking all business in force, annual and term, this fund as required by law would probably average about seventy per cent of the aggregate annual premiums, though the companies are compelled to pay cash for commissions and other running expenses, averaging say forty per cent of the premiums; hence it is probably not far from the truth to assume that the average income derived from the unearned premium fund would be equivalent to interest at current rates upon a sum equal to say one-half the annual premiums. The States very properly scrutinize the character of the investments of the companies, and the rate of interest is necessarily low, averaging probably not more than 4 per cent per annum. This would yield the companies, as interest upon the unearned premium reserve, say 2 per cent annually, which added to the 3 per cent profits from the sales of indemnity during the most profitable decades in the history of the business, would leave a net profit to all companies upon all business of not over 5 per cent. This estimate does not include the large number of companies that have been forced out of business by city conflagrations or other causes, nor the companies still in existence that have had their assets depleted or destroyed by conflagrations and have made the impairment good by contributions from stockholders or by sales of new stock. A number of the most prominent stock fire companies now doing business in this country have been saved from destruction in this way, and so far as the fire companies of this State are concerned, the Chicago fire wiped every Illinois company out of existence, while the San Francisco fire ruined three of the largest Illinois companies. Two of these companies passed out of existence, while one is able to continue in business because its stockholders heroically restored its entire assets out of their own pockets. It is facts such as these that cause fire underwriters of the longest experience

to contend that, taking the country as a whole, no profit has been made from the sale of fire indemnity during the past fifty years or since statistics have been kept.

Each company's own capital stock and net surplus are invested in stocks and bonds, and as before stated, these investments must pass muster with the State authorities, who are prompt to rule out any investments of doubtful character. The high character of investments thus required is naturally accompanied by a reduced income from the dividends and interest received from these investments. The income derived from this source probably does not average over 4 per cent on the aggregate assets of the companies. By the nature of their liabilities fire companies are largely debarred from investing in real estate loans, as the impending danger of city conflagrations compels them to invest in securities that can be converted into cash in the great markets of the country on very short notice. Some companies have been notably successful in investing their funds in the stock market, and in this way have made more money by judicious investments than they have made from underwriting profit. It is obvious that this income from the company's own assets has no connection with the transaction of fire insurance, as the stockholders, either singly or collectively, could invest their money to better advantage without subjecting it to the restrictions of State control or to the perils of city conflagrations which now and then consume by a single fire the greater part of fire insurance capital.

This fact is shown by the following excerpt from the Chicago Record-Herald of December 2d, 1910:

"A tabulation of eighty-two American fire insurance companies, with assets of over a million dollars each, shows that their earnings on investment not only paid their entire dividends during the past ten years, but contributed \$46,127,929.00, to make up deficiencies in the underwriting account due to conflagration losses to strengthen surplus funds. In addition to this the stockholders of these companies have contributed to surplus funds, either by assessments or by premiums on new stock issued, the sum of \$24,621,180.00, making an aggregate of \$70,749,109.00 earned by investments or contributed by stockholders in excess of amounts paid out in dividends. During the ten years the *investment* earnings of the eighty-two companies were \$117,117,733.00, while the dividends paid were \$70,989,804.00."

During the long years of heated controversy over fire insurance and during the investigations of your commission the only man not heard from seems to be the stockholder, and in him lies the final goal to which restrictive legislation can go. When and where the silent stockholder will decide that he can profitably shift his funds from fire insurance stocks to some other form of investment is an economic problem for each State to determine. So far there has been no notable scarcity of investors in fire insurance stocks,—in fact, the constant and widespread assertions of interested parties in regard to the fabulous profits in fire insurance stocks has created a popular faith in this form of investment which has been taken advantage of by promoters of new fire companies. The reckless statements made in the advertising matter of these enterprises has finally caused the State authorities to take united and drastic action in suppressing this form of swindling.

So far we have been describing the fire insurance business as a whole. An inspection of the companies severally, indicates that while the statistical totals show a net profit ranging, according to the various sources of information, from nothing to a possible maximum of 5 per cent, this profit, whatever it may really be, has been very unequally distributed among the companies. An examination of the reports filed with the Commission shows that from the time of the Chicago fire to the present, about forty years, hundreds of companies have failed or retired. Possibly no fact of greater significance can be presented in this connection, than the statement made by Mr. Charles A. Jenney, F. S. S., in the publication, "Fire Insurance by States," 1909, that from 1880 to the close of 1908, 912 fire insurance companies retired from business in the United States, and at the end of the period mentioned only 162 stock companies were reporting to the New York

department. Of the companies now in existence worthy of consideration, some are losing ground and evidently destined to an early retirement. Some are barely holding their own, some show what might be considered a fair growth, while a few seem to be forging ahead at a rapid pace. There is no way of accounting for these things except through what would be a tedious and profitless analysis of the financial statements of the several companies. The disparities are no greater perhaps than can be found in other forms of modern activities and may probably best be accounted for by the law of survival found in every industry. It is proper to point out, however, the significant fact that the records do not show a single company that might be considered a notable success which has begun business during the past thirty years and done business on its own responsibility, without the backing in some form of an old and strong company.

This bird's-eye view of fire insurance as a whole seems necessary to an intelligent comprehension of the phenomena of the business. Indeed, the business as a whole must command our attention, for fire insurance is a business of averages and in any comprehensive study of its manifestations the experience of a single company is of little more value than the experience of a single risk. Considering fire insurance in this way as a form of industrial activity, we find it to be transacted under two different plans, known respectively as stock and mutual insurance. In considering the stock company form of insurance it seems important to reach an intelligent and common understanding as to the real nature and function of the company's own assets. These assets constitute a cash fund which the States by their laws require shall be maintained for the safety of the public, and under the laws any depletion of a stock company's capital and required surplus must be made good; hence under the theory of our laws it seems to be the clear intention that the capital and surplus of fire insurance shall not be impaired, but maintained for the security of policy holders. On the other side the theory of the stockholder, like that of every investor, is that if his investment is impaired he shall have the right to raise his prices to make good the impairment caused by selling his goods below cost, and from our point of view this cost is not the cost to any individual company, but the cost shown by the average transactions of the entire business. The stockholder's cost is not determined when he sells his indemnity, but is revealed by the expiration of his policies. When he sells below cost he becomes a creditor, in small scattered amounts, of thousands of policy holders, who may or may not be willing to pay, because there is no legal or even moral obligation on their part to make good the deficit. The stockholder's business is not wholesale but retail, each transaction being separate. He cannot sell his policies by the gross or even dozen, but must sell each policy severally, pinning his faith to the law of average as developed by the transactions of the business. In any form of merchandising, service and risk of this kind would justify the ordinary retail profit, but the statistics of the fire business indicate that all stockholders are willing year after year to sell to all policy holders fire indemnity for a net profit of not over 5 per cent. From this view-point of the State and the stockholder, it seems evident that the principle of mutuality is basic even in the stock form of fire insurance, the mutuality manifesting itself in a wholesale rather than in a retail way, as in the so-called plan of mutual insurance. In both forms the policy holder is expected to pay the cost of the indemnity he buys, plus a profit of say 5 per cent to the stock company, for the safety vouchsafed by cash assets. Mutual insurance each year, as determined by its experience, raises or lowers the rate of each policy holder. Stock insurance seeks to make its rate adjustments on behalf of the entire business through the application of tariff measurement. Mutual insurance, so far as shown by the evidence, has no common tariff, and few, if any, mutual companies appear to have an individual tariff; hence it is necessary that each company name an arbitrary rate for each risk or make use of the tariff rates of the stock companies, without, so far as we can learn, having made any contribution to the expense of producing such rates.

Discrimination seems to be quite as possible, and is probably even more general, under the mutual plan than under the stock plan, for without any means of measuring hazard, discrimination is inevitable.

This seems in brief to be the real difference between the stock and mutual forms of fire insurance, and the economic question arises—Is the safety afforded to the public by the cash assets kept under State supervision worth the average 5 per cent that stock insurance seeks to collect for the perils assumed by these assets?

In considering this question intelligently we cannot overlook the part played by a most important factor of hazard in this country, which seems to be practically absent throughout Europe, where rates are so much lower than here. This factor, known as Exposure, probably constitutes about one-third of the entire fire hazard of the country and is responsible for all the combustion outside of the building where it originates. In every fire that destroys more than one building, all the loss that occurs outside of this building is properly chargeable to exposure; hence in every conflagration, whether two or two thousand buildings be destroyed, the entire loss outside of the originating building is due to exposure, and every building in every one of our towns and cities may in a sense be regarded as potentially a criminal, capable of destroying the entire town or city. This is no mere theory, but historical fact demonstrated every day by conflagrations which transform the business centers of our towns and cities into ash heaps.

The State of Illinois furnished one of the most emphatic illustrations of the unlimited scope of exposure in the great Chicago fire of 1871. The testimony we submit shows a succession of these city conflagrations since that time, culminating in the San Francisco conflagration of 1906. The same testimony shows that in the cities of Great Britain and Europe fire underwriters are able to transact business on the assumption that fire never escapes from a building and seldom escapes from the floor of the building where it originates. In this great contagious factor of exposure we seem to find an intelligent answer to the question whether the safety afforded to the public by the cash assets demanded by the stock plan of insurance justifies the stockholder in exacting an average 5 per cent profit on the sale of fire indemnity. Mutual insurance is not equipped for conflagrations, for it has no way of meeting exceptional demands upon its comparatively empty cash box except through assessments upon its membership, and the public cannot afford to await a slow and tedious process of collection, which experience shows often fails to collect. The result is that mutual insurance is practically impotent to deal with the ramifications of exposure. It must confine itself to unexposed risks as found in the country and in the outskirts of our towns and cities, or, in the form known as reciprocal, individual indemnity, etc., in which a number of large mercantile or manufacturing concerns join in insuring each other; the number of policies in the business district of any one town or city must necessarily be limited to not over five or six. Whether this is insurance, in the true sense of the term, we leave to economists, but it is very certain that none of the varieties of mutual insurance now known, would be of very great value in event of conflagration and thus far at least fail to serve the economic need. The facts show that the responsibility of shouldering city conflagrations rests almost entirely upon the shoulders of the stock form of insurance. If the public expects protection against these conflagrations it must obtain it through this form of indemnity.

In the tremendous fluctuations of the aggregate loss ratio of the country caused by these conflagrations, we find an explanation of the widespread public prejudice against the stock form of insurance. While the stockholder may not expect an average return of over 5 per cent for the chances he takes, the losses of a single year of exceptional conflagration will wipe out his profits for a great number of years. To raise the rates enough to enable him to collect back his deficit in a single year is impracticable, and experience has shown that any advance whatever, after a large conflagration, is almost certain to make the succeeding years exceptionally profitable and cause a period of public clamor and rate cutting competition. The public

mind does not seem able to grasp the idea that stock insurance is its only protection against great conflagrations, or that, under the principle of mutuality, which is fundamental in this form of insurance, the losses resulting from these conflagrations must in some way be met by policy holders generally, through a rate advance. In the past, stock fire insurance has made good the deficit caused by these conflagrations as best it could by assessments on stockholders, or, when not interdicted by anti-compact laws, through rate advances as far as competition would permit. It must be admitted that the competition that has done most to prevent any systematic rate adjustments to meet these conflagrations has emanated from stock companies which under the fortunes of war, escape with light losses because of the small business they may happen to have in the burned district. In the perpetual strife among stock companies themselves, these companies with unimpaired assets stand ready to seize the opportunity to increase their business by a general disregard of rate advances. Like the public generally, these companies are not concerned with the interests of either fire insurance or the public as a whole, but are animated solely by a desire to seize every strategic opportunity for individual benefit. Chaotic conditions in the business and unfair apportionment of rates between States, localities and property classes, preferred classes, relief rates, term rates and blanket insurance, favoritism, inconsistency and discrimination generally, may one and all be traced directly or indirectly to the disturbing influence of city conflagrations under unrestricted competition. That this competition has inured to the benefit of corporations, trusts and large property values generally, at the expense of small property owners, has been demonstrated in many States where anti-compact laws have longest sought to enforce open competition and by the fact that recently three States, Kansas, Texas and Louisiana, where these laws have been longest in force, have reversed their legislative theories and enacted laws compelling the fire companies to file their schedules, under heavy penalties for discrimination. A comparative examination of the laws and rates of the several States fails to show any benefits that have accrued to the public in the States that have enacted anti-compact laws, and in Europe, where rates are but a small fraction of the rates prevailing in this country, we have been unable to find any restrictive laws of the anti-compact type.

In this summary of conditions in fire insurance it is our duty to call your attention to the subject of taxation, discussed elsewhere at greater length. From the published tabulations of the National Board of Fire Underwriters we find that the aggregate annual values of fire indemnity are taxed by the several states an average of 2.65 per cent. This state taxation on gross sales is as much as the aggregate net profits of all companies from the sales of fire indemnity and seems to indicate that stock insurance is transacted as a sort of silent partnership (limited) with the state, in which the state's half of the profits has more than the certainty of dividends on cumulative preferred stock in a corporation, for the state secures its preferred dividend regardless of whether the business has made or lost during the year. This is shown by the fact that during the fifteen years from 1891 to 1906, inclusive, the states collected their taxes for nine out of the fifteen years in which the companies lost money. During these nine years the companies' loss on underwriting was \$187,600,652.00, while the states collected in taxes \$38,141,763. The table containing these figures will be found in the annual report of the National Board of Fire Underwriters for 1910, Appendix B, No. 34.

In this incomplete review of fire insurance conditions we have been compelled to consider conditions from the standpoint of all states and for the business as a whole, for it is impossible to obtain any intelligent idea of the vast and perplexing manifestations of the business in any other way. Several hundred thousand persons, male and female, are actively interested in fire insurance in some capacity—stockholders, officials, employes, field men, adjusters, raters, local agents and brokers with divers duties and at times antagonistic interests. While numerous associations exist, local and sectional,

definite and generally recognized authority does not seem to be lodged anywhere, and fire insurance might be called an organism without a head—an organism infested with parasitism of divers kinds and obscure forms. In earlier days the business seems to have developed a rather high degree of organic unity through controlling associations, and many evils that were plainly as injurious to the public as to the business were held in check, but the attitude of these associations was at times arbitrary and inconsiderate of the feelings of the public, which through statutory enactment seems finally to have disorganized the business and left it a prey to disintegrating influences from within and without. At every turn the problems in the business seem to be so complicated and confusing that they do not appear to be generally understood by fire underwriters themselves and not understood at all by the general public. In theory the problem of a just distribution of the burden of fire waste seems to be ideal, but in practice it has become a hotbed of modern commercialism, in which companies, agents, brokers and large property owners are engaged in a struggle for advantage.

With these facts before you, it is for your legislative wisdom to decide in what spirit you will deal with the fire insurance business—whether you will treat it as a parasitic form of gambling activity that preys upon the community, or as an indispensable form of service to the body politic, a service which through its cash guarantees, purveys safety and confidence to commerce, manufacturing, transportation, banking and property interests generally, in the face of conflagrations unparalleled in the world's history.

Your commission does not hesitate to state its conviction that the latter is the only true point of view. *Stock* fire insurance is an indisputable necessity to the public. Other forms of fire insurance are by their nature limited in their scope of utility and of comparatively little value in affording protection in times of disaster. They serve but a small portion of the community and protect but a small part of our property values, and as an economic necessity could be dispensed with without appreciable hardships to the public, while stock fire insurance cannot be so dispensed with until the time comes, if ever, when some better form of transacting the business shall have been devised. If your body believes that the vested cash assets of stock fire insurance are entitled to compensation for the risks assumed in guaranteeing the solvency of this form of insurance, it seems to be a plain duty to find the minimum of trade profit in the sale of its indemnity that will justify the capital engaged. If 5 per cent is more than adequate, the margin of profit should be reduced; but whatever may be adequate, whether 5 per cent or 1 per cent, the business should be so protected that fire insurance capital would be as sure of its return as capital invested in banking. Our inquiries from leading underwriters lead us to assume that an assured margin of $2\frac{1}{2}$ per cent, plus the interest from unearned premiums, is large enough to warrant the present capital invested in the business and large enough to attract additional capital as fast as needed to protect the insurable values of the country. With this insignificant margin of profit, the so-called mutual form of insurance would have little to offer the public over the mutuality that would inevitably result from the official recognition of systematic tariff rating applied to the entire property values of the country. We realize that this is beyond the power of any single state to accomplish, while other states continue either to keep the business in a straight jacket or allow it to run wild from legislative neglect. From nearly every standpoint fire insurance seems to be interstate in its nature, perhaps more nearly so than any other business. It is based upon averages and distribution, and if we take into account large conflagrations, neither average nor distribution can be intelligently applied within the limits of any single state.

This brings us to our first suggestion, namely, that the State of Illinois take the lead in an effort to bring about sane conditions in lieu of the existing chaos in fire insurance by coöperating with other states in the formation of a uniform fire insurance code for use in all states. In this connection we call your attention to the fact that the National Conference on Uniform

State Legislation, convened by the National Civic Federation in Washington, D. C., last January, passed the following resolution: "*Resolved, that we favor a uniform insurance code for adoption in the several states.*" This action was followed by a resolution asking the National Civic Federation to organize state branches for the purpose of promoting the cause of uniformity, and an invitation was given to the National Board of Fire Underwriters to name representatives of the insurance interests in each of the several states as members of each branch. The question of preparing a uniform code has been assigned to the committee on laws of this body. The State of Illinois would not do a wiser thing than to refer this subject to its insurance department, with instructions to coöperate actively in this movement and use its influence in securing like coöperation from other states. The commission does not make this suggestion having in view federal control, but that the business of insurance may be supervised, as at present by the several states, but under laws which will have the same meaning and application in Maine and Oregon.

In view of this important movement for uniform legislation, which seems to appeal to common sense; and pending further action in this direction, it is for you to decide whether any immediate steps are desirable in the way of fire insurance legislation. Conditions are perhaps as satisfactory in Illinois as in other states, and of late in many important respects have been growing perceptibly better. With this preface we will pass on to the most important features of the business in which acknowledged evils exist, describe each as briefly as possible, and suggest such legislative action as may seem advisable.

FIRE WASTE.

It is perhaps unnecessary to suggest that it is fire waste that makes fire insurance a public necessity or to call attention to the fact that there is nothing sentimental in the business. Fire insurance is business, and not philanthropy. A man joins a mutual company, not for the pleasure of paying other people's losses, but in order to buy indemnity, such as can be thus furnished, on what he regards the best terms. Another man buys fire insurance stocks, not for the purpose of scattering bounty among fire sufferers, but in the expectation of securing dividends. From any standpoint we may regard it, policy holders must make good their own losses, plus the expenses of transacting the business. Stock insurance expects a net profit of say 5 per cent as compensation for the risk assumed by the cash capital it puts up as a guarantee to policy holders against fires of all dimensions, from a single risk to an entire city. Any smaller profit would in all probability cause capital to seek other and safer forms of investment. During the ten-year period ending December 31, 1910, stock insurance did not earn its 5 per cent, or any part of it. On the contrary, for the past ten years it has lost an average of 2.8 per cent on every dollar of indemnity sold, as shown by the last reports of the National Board of Fire Underwriters. Few varieties of business could stand an average loss on their gross sales of 2.8 per cent for ten years; and if we descend from generals to particulars, fire insurance has not stood it, for many companies have failed and many others survive because they were able to raise money by assessing their stockholders or selling new stock. Fire insurance assets are not as large as they were ten years ago. Stockholders are not as optimistic in responding to heroic assessments, and notwithstanding the reiterated assertions of interested persons as to the fabulous profits of fire insurance, the public is not eager to invest in fire insurance stocks. Another Baltimore or San Francisco conflagration would probably produce disastrous consequences not pleasant to contemplate. We feel justified in stating these facts plainly, for it seems time to call a halt on the reckless assertions which are creating dangerous delusions in the popular mind.

In our judgment, the safety of the American public depends upon the ability of stock insurance to make good, in the event of an impending city conflagra-

tion which may occur at any time. Fire rates in the United States are discouragingly high, but during the past ten years they have not been high enough to make good the fire waste and expenses of the business, and the only hope of relief for the public lies in the reduction of fire waste and expenses. The former may be accomplished by legislative enforcement of better building construction, greater care in the storage and sale of combustible and explosive substances and the closer supervision of insurable property on the part of public officials and owners. There are about eleven million buildings in the United States. These cannot all be torn down and reconstructed for the sake of lower rates, and any reduction of hazard from structural betterments must come slowly; but every fire-proof structure built among combustible buildings might be regarded as a policeman standing between belligerents threatening to destroy each other. Important results may be expected from laws requiring safe chimneys, flues, parapets, fire doors and shutters—in fact, every measure intended to shut off exposures and as nearly as possible confine every fire to the building where it starts, would be a measure of protection to the entire community which might be expected to yield instant results. Our laws forbid the owner of a dangerous animal to allow it to run at large, but they permit men to erect and neglect buildings that are a constant menace to the life and property values of an entire town or city. For the reasons stated, laws should also rigidly regulate the handling and sale of high combustibles and explosives which are a menace to both life and property.

The commission believes that the present Fire Marshal law, when it becomes operative, will be instrumental in effecting a marked decrease in the burning ratio of the State and be a boon to the people at large.

Much can be accomplished in awakening public opinion upon the subject of conserving life and property against the dangers of fire by a campaign of publicity through State departments, and especially through occasional instructions to pupils in our public schools.

If the people of the State can be brought to realize the importance of fire waste in life and property and how fully the remedy is within themselves, we are confident that marked improvement would be observed in the near future. Let property owners understand that in order to secure a satisfactory insurance rate they should not only offer good risks themselves, but require their neighbors to do the same, and the problem of reducing fire waste would be well on the way to solution.

EXPENSES.

The entire outgo of fire insurance is found in losses and expenses, unless we take into account the 5 per cent profit before referred to. Having suggested the means of reducing losses, it is in order to investigate the possibility of a reduction in expenses as the only remaining source from which it is possible to reduce rates without trenching upon the cash assets of the business, which public safety demands shall be held intact. The average expenses of stock insurance during recent years, as shown by tabulated reports to state departments which we have examined, has been about 38½ per cent of the aggregate premiums received. This expense is divisible into two distinct parts, one of which, known as fixed expense, covers such items as salaries, rents, stationery, printing, adjustments, inspection, rating, traveling expenses, etc. Considered as a ratio, fixed expense decreases in proportion as the volume of annual income of a company increases. For example, if the fixed expenses of a company be \$100,000.00 per annum, they would be 10 per cent if its annual premiums were \$1,000,000.00, or only 2 per cent if its premiums were \$5,000,000.00 per annum. This makes increase of premiums a vital necessity if a company expects to survive in the stress of modern competition. The only way a company can increase its premiums is to secure more agents and, as far as possible, increase the premiums received from each agent. The most effective way to secure more agents and more business is to furnish inducement in the size of commissions paid agents.

This accounts for the reckless and at times seemingly insane competition to secure agents and premiums. A comparison, taken from published reports, shows that during the ten-year period from 1860 to 1870 the average expenses on all business were 31 per cent, while during the past four years they have averaged $38\frac{1}{2}$ per cent of the aggregate premiums received. This shows an increase of $7\frac{1}{2}$ per cent in total expenses, and the question arises whether or not this increase has occurred in the fixed expenses. A similar comparison of the commissions which form a part of the preceding total expense shows that during the same period commissions increased from 11.32 to 21.50 per cent—an increase of 10.18 per cent. From this it follows that while commissions have increased 10.18 per cent, or nearly double, since 1870, other expenses have decreased 2.68 per cent. This, however, does not tell the whole story. It is conceded that State taxes have materially increased since 1870 and that the stock companies are now maintaining laboratories for the investigation of fire hazard in all its present ramifications, also salvage corps in the large cities, besides high salaried experts in inspection in all parts of the country. In addition to these new factors of expense, the work of measuring fire hazard has constantly grown more technical and expensive, and this work, which did not exist in 1870, when each company as a rule simply guessed at its rates, has grown into an important item of expense, averaging about $1\frac{1}{2}$ per cent. It is safe to assume that the item of fixed expense has been increased at least three or four points by work now regarded as necessary for the welfare of the public and the business. This would indicate that while commissions have increased 10.18 per cent, fixed expenses have decreased about 6 per cent.

Turning our attention from fixed expenses which appear as percentages of premium income, we find the latter to be composed of agents' commissions and taxes. Commissions, as before stated, have averaged about 21.50 per cent during recent years, while taxes have ranged during the past ten years from 2.50 to 3.35 per cent of the aggregate premiums of the companies in all states; or, taking these two percentage items together, they aggregate about one-fourth of the total premium income of the companies, and figured upon the aggregate premiums of last year make a total of about \$68,000,000.00 disbursed for commissions and State taxes, or for commissions alone about \$58,428,400.00. These are formidable sums and demand a careful examination as to their economic justification.

Deferring our consideration of taxes, we will first take up the subject of agents' commissions. It seems proper at the outset to call attention to an important distinction between fixed expenses and commissions. Fixed expenses go largely to the important work of supervision, inspections, rating and adjustments—in other words, they maintain the regulative and supervisory part of the business and are largely unavoidable in the establishment of order and system. A large part of this expense is without doubt advantageous, to the public as well as the business. On the other hand, commissions perform the function of securing business. They largely represent the commercial side of the business, and it is this factor that is most largely responsible for the rank spirit of commercialism so much deprecated at present by public sentiment. In the face of this difference the subject of compensation to agents demands our most careful scrutiny, and in this scrutiny must be included brokerage as well as commissions, for the broker is purely an independent business getter and may properly be regarded as a side manifestation of the spirit of commercialism, in whom this spirit rules supreme, for the nature of the broker's work is such that he owes no definite allegiance either to fire insurance or the community.

We have endeavored to explain the reason why fire companies have for many years been engaged in a mad race for volume of business. The necessary and inevitable result of this has been a competition fatal to sound and economical underwriting and expensive to the buyers of insurance, who in the last analysis pay the bill.

This condition has been very well expressed in a report of the committee on expense of insurance companies to the National Association of Insurance Officials at its Mobile meeting on September 27, 1910. In part the report is as follows:

"As a result of its investigation your committee is persuaded that during recent years the competition between companies has been more in the direction of increasing the volume of business written, with consequent increased expenses, than of lowering the cost to the insured.

"Your committee finds no justification for the varying conditions referred to. The cause is to be found in the existing system of compensating agents and brokers. In the judgment of your committee, this system is grossly erroneous, in that it unerringly makes for increased expenses and increased fire waste. Fire insurance is essentially a business of averages, and there is no sound business reason why a greater commission should be paid for one class of risks than for another, nor why one class should be preferred to another class.

"A feature of the business for which your committee can find no reasonable excuse is that the compensation of brokers who are employed by and render service only to the property owner is paid by the insurance companies from whom they seek indemnity required by their clients. Your committee is of the opinion that these services should be paid for by those for whose benefit they are rendered. This feature is but one of the indefensible conditions which make for increased expenses, and is another evidence that the companies are competing for volume of business by outbidding each other in the price paid therefor.

"The condition disclosed by the investigation include another incongruous feature. This is that the expense of procuring business is greater in cities where the demand for the indemnity the companies have for sale is in excess of the supply.

"Your committee has no criticism to make of expenditures for inspection, building codes, expert advice bearing on construction, electrical equipment, etc., maintenance of laboratories or other agencies which make for conditions which must result in the reduction of fire waste. The public should and doubtless will endorse all expenditures intelligently made for these and kindred purposes.

"Being of the opinion that the present system of compensating agents and brokers necessarily increases fire losses and the expense of conducting the business, and is the cause of conditions of which the insuring public justly complain, your committee believes that practically all of the unsatisfactory conditions which agitate the public and lead to unscientific and unavailing legislation, designed to reduce the expense of conducting the business and consequently the cost of fire insurance, can be eliminated by a radical change in methods."

It must be evident to any student of fire insurance, as it is to this commission, that too much money is paid in the way of commissions and brokerage to persons who do not perform a service commensurate with the pay they receive. The committee of the National Association of Insurance Officials is entirely correct in the conclusion that these charges should be reduced and that the "brokerage evil," which it is admitted on all hands is one of the chief causes of the trouble, should be remedied.

We believe the time is not far distant in the evolution of fire insurance when every person connected with the business will be required to demonstrate that he performs a service commensurate with the compensation he receives, and that he must establish some better claim to so large a proportion of the insurance tax than the fact that he is a friend or relative of the property owner whose insurance is to be written.

Theoretically, and we believe practically, the insurance tax should be fairly and equitably spread, and this cannot be done, if in any localities expense conditions exist such as we now find in the cities which are large centers of insurance values.

No person who performs a valuable service in the apportionment, collection or distribution of the insurance tax should be denied proper compensation; but if that service is of value only to some individual or corporation, or possibly of no appreciable value whatever, it should neither be recognized nor compensated.

There seems to be no reason why physical hazard cannot be measured and equitably covered by the rate or premium charge, and the fact that there exists the so-called preferred classes is a confession upon the part of the insurance companies that these classes are the victims of overcharge. In other words, the very name "preferred" indicates that the fire insurance companies exact from certain classes of risks a greater margin of profit than some other classes, and a considerable part of the overcharge upon the so-called preferred classes has been used by the companies for the payment of excess commissions and brokerage, and in our opinion this is a practice unwarranted by any conditions which have been brought to our notice.

It may be true, in the case of remote dwellings, that the amount involved is small and the commissions upon premiums would in many instances be too insignificant to afford proper compensation for the time and labor involved, but if this is found to be the fact, the class of dwellings in question should be penalized, and not all dwellings.

If there were an equitable distribution of the premium charge over all property in the State, the commission and brokerage evil would very likely correct itself, because without the overcharge upon preferred classes excessive commissions would, in our opinion, be impossible.

We find this condition emphasized by the difference in rates upon the dwelling class, for example, in Chicago, and over the State at large, and we are of the opinion that there is absolutely no reason for charging the owners of dwelling house property in Chicago more for insurance than is charged for property similarly situated over the State at large, except such reason may be found in the fact that from 10 to 25 per cent more is paid for commissions and brokerage in Chicago upon business of this kind than elsewhere. A considerable part of this excess commission or brokerage is paid to those who have no expert knowledge of the insurance business whatever, and who, in the opinion of this commission, perform no services for which they are entitled to any compensation, except such as might be paid by the owners of risks.

This conclusion is fully sustained by the testimony of a great number of witnesses before the commission whose expert knowledge of the business is not to be questioned.

The commission is very strongly of the opinion that the present expense of doing the business of fire insurance is too great and that it ought to be reduced, and especially the item of commission and brokerage, constituting more than one-half of the entire expense of the business. In this view practically all of the experienced underwriters who have been upon the witness stand coincide, but most of them admit their inability or that of the insurance companies to regulate commissions without the assistance of the State.

The regulation of commissions by the State would be attended by difficulties, because of the numerous possibilities of evasion of any law that might be enacted, though it is true that legislation of this character has been upheld in the regulation of life insurance, where the problems of evasion are about the same. The impossibility of securing united action on the part of all companies in regulating commissions is conclusively shown by the history of the business, for there has never been a time when more than a small majority of the general agency companies were willing to join in such regulation; and instigated by the opposition of agents to such regulation, the laws of many states forbid any agreement among companies as to commissions. The theory of these laws is doubtless found in the claim that any agreement among employers as to compensation of employes or servants is *ultra vires*, but it is a question whether the local agent in fire insurance is either in fact or theory a servant or employé in the real meaning of the

term. The usage of the business is that an agent may represent as many companies as he can keep satisfied with the business he accords to each in the distribution of his risks. He is compensated not by a fixed wage, but by an agreed ratio of his sales of indemnity. He is in reality a commission merchant. Commission merchants the world over are at liberty to establish joint scales of commission, which are generally imposed by so-called boards of trade, chambers of commerce or other forms of association. On the other hand, there can be no valid objection to any number of consignors of merchandise agreeing among themselves what commission they will allow. An insurance company is in the same position with its agents as the consignor of merchandise for sale, for it sends its agents consignments of blank policies to be filled out and sold. Under the circumstances the relation between principal and agent in fire insurance does not seem in any sense to resemble the relation between an employer and an employé, and there does not appear to be any equitable ground why the State should not agree upon a uniform scale of commissions, if they are able to come to an agreement, which seems to be impossible. The impossibility of companies agreeing among themselves will be understood from the following brief recital of the story of commissions. It appears from the testimony that the so-called Western Union, a company organization with authority over about twenty states, was organized about thirty years ago, with about one-half of the general agency companies in its membership. The corner stone of this organization was a uniform commission of 15 per cent, except in a few large cities, where powerful agency influences rejected this commission. These cities have practically remained a law unto themselves with reference to commissions ever since and are mentioned by a number of witnesses and commonly known as excepted cities. The union companies, however, maintained their 15 per cent commission elsewhere for several years, during which the non-union companies remained in the same agencies with them and, it is charged, systematically bought the so-called preferred business from their common agents by paying higher commissions. The so-called union companies say the long sustained loss of their preferred business finally compelled them to establish a graded scale of commissions, ranging, according to the desirability of the business, from 15 to 25 per cent. This scale of commissions was allowed to agents who represented only union companies, and in mixed agencies the agent was allowed only 15 per cent. This brought about what has been testified to as the separation movement, and the agencies in union territory, with few exceptions, are now divided into union and non-union. The non-union companies by this means forced into agencies with each other without any agreement as to commissions, it is claimed, continued their process of securing business from each other by paying higher and higher commissions. This process of bidding up commissions lasted until the present year, when conditions became so serious that nearly all the prominent non-union companies organized another association, known as the Western Bureau, with a graded scale of commissions somewhat higher than that of the union companies. These facts show that without some regulation of commissions, either on the part of the companies themselves or by State legislation, commissions will inevitably continue to climb without limit; and inasmuch as policy holders themselves must pay commissions as well as losses, the story of commissions plainly shows the economic necessity of imposing upon the business some reasonable and uniform commission scale, for open competition in commissions is a serious public evil, for which the patrons of fire insurance must foot the bill. It is really a case of the public's paying the freight.

Without recommending a law upon the subject, but with a firm belief in the salutary effects of publicity, we suggest that the evils arising from this source would largely be cured by a law requiring every admitted company to file with the State Insurance Department, subject to public inspection, a copy of the uniform scale of commissions it allows to all agents in the State, with a penal clause for discrimination. This law might be reinforced by requiring the insurance department, in commissioning every agent, to exact a written

agreement that the agent will not, directly or indirectly, accept from any company higher commissions than are named in the scale filed by this company with the insurance department.

TAXES.

This is an element of expense which seems to be indefensible from any viewpoint and which is entirely under the control of the State. The fire insurance companies doing business in this State pay annually nearly three per cent of their gross premiums in the form of taxes.

These corporations should be taxed upon their tangible property, but taxes upon premiums, for the support of fire departments, and other similar, requirements, seem to be illogical and contrary to the scheme of taxation provided for in the constitution of the State.

Statistics indicate that somewhere between 60 and 70 per cent of the insurable property of the State of Illinois is covered by fire insurance, and of necessity all the premium receipts must come from the property insured.

Taxes upon reserves or upon premium receipts of whatever character must then be a tax upon only a part of the taxable property, as much for the benefit of the uninsured as the insured.

Again, the reserves or premium receipts of fire insurance companies are not assets in the sense in which this term is ordinarily understood, nor property within the taxation meaning of the term, but are chiefly sums of money required by law to be set aside for the protection of policy holders, and we know that only a percentage of the total premium receipts of any insurance company remain at the end of any given year, yet the law of Illinois provides for certain license fees for agents, fees for filing reports, two per cent tax for the support of fire departments, and that the net premiums of all foreign insurance companies shall be taxed in the various parts of the State as other personal property is taxed. No other business is so far penalized as to be taxed upon its liabilities.

No doubt exists as to the necessity of establishing and maintaining efficient fire departments, although it is possible that more care in preventing fires and less attention to extinguishing them would produce better and more substantial results and an immediate and very material reduction in the fire waste. However this may be, the fire department in any city is established and maintained for the benefit of all the people and all the property and not a portion of either, and so should be supported by taxation upon all property, not a part of it.

It requires no argument to convince any one that all items of tax upon insurance companies become a part of the general premium charge and are paid by the policy-holders or purchasers of insurance, and so these taxes are paid by only a part of the property owners of any community, but for the benefit of those who contribute nothing as well as those who pay the price.

If all the property in the State were insured for an average proportion of its insurable value, as we indicate elsewhere in this report should be done, these taxes might then be so distributed as to produce no injustice, but so long as this condition is not found the burden falls upon the thrifty insurer for the benefit of his improvident neighbor.

The laws providing for these impositions are sustained by the courts, not upon the grounds of equity and justice, but because the State has a right to prescribe the conditions upon which a foreign corporation may do business within its borders. No State as wealthy and important as Illinois has or ever will have sufficient insurance capital to take care of its business needs, and therefore the policy of the State toward the foreign companies should be such as to provide our people with the greatest possible amount of sound indemnity at the least possible cost, and with only such restrictions and taxes as are necessary to safeguard the business and furnish proper supervision.

The commission believes that a sufficient tax should be levied upon the insurance interests doing business in the State to properly maintain the insurance department, that other laws providing for taxation should be modified and that the premiums and reserves of fire insurance companies should not be taxed except for the maintenance of the department and as Illinois corporations are taxed by other States.

The cost of maintaining the insurance department of the State of Illinois is about \$60,000.00 per annum and the total annual taxes levied upon insurance companies doing business in this State, payable to the insurance department and by it returned to the State treasurer, amount to about \$425,000.00, in addition to which the fire companies are taxed by municipalities for the maintenance of fire departments and by the various taxing bodies in every county and township in the State upon their net premiums as other personal property is taxed, and by net premiums is meant the gross premiums less the expense of doing the business, no losses being deducted.

The National Association of Insurance Commissioners, at its convention held in Detroit, Michigan, in 1908, discussed the question of the taxation of insurance companies and adopted certain resolutions upon this subject, which are in substance as follows:

1. Favoring an equitable system of uniform taxation.
2. That all laws authorizing the taxation of premium incomes in counties and municipalities as an item of property should be repealed.
3. That all laws and ordinances authorizing occupation or license taxes in counties, cities, towns and villages, should be repealed.
4. That the laws of States imposing fees and licenses for the maintenance of insurance departments should be revised upon an equitable basis and so regulated as to produce no more than enough to support the department.

These resolutions express the view of every intelligent insurance official and every supervising department, so far as the commission has been able to learn, and we believe that the present system of taxation of fire insurance companies is unjust and inequitable and should be revised.

THE AGENTS' QUALIFICATIONS.

Having pointed out the only practicable way to lessen fire rates through a reduction of losses and expenses, it is our duty to call attention to another important source of leakage, namely, the agent. Ninety per cent of the annual business of fire insurance is solicited and the policies written by local agents, paid by commissions. Possibly an investigation of the agency system may not be within the province of the commission under the terms of the resolution of the General Assembly, but if this system is responsible for any appreciable part of the fire rate, which reflects the fire waste of the country, it seems to be a legitimate object for our investigations.

That both, ignorant and unscrupulous local agents do increase national waste of life and property, and necessarily the average fire rate, is a matter of common notoriety among fire underwriters, as is shown by the following quotation from a well-known underwriter:

"There is no function incident to modern civilization in which public interests are more closely implicated than the function of the fire insurance agent, and no quasi-public servant who is so dangerously free from personal responsibility. The railroad engineer holds the lives of a trainload of people in his hands; he is not permitted to practice his vocation until he has passed a rigid examination as to his competency and character; if he blunder he is held personally accountable for any failure in the discharge of his duty. The fire insurance agent is not required to submit to an examination as to his mental or moral fitness, but he may issue a contract that will be the direct cause of a criminal intent which may result more disastrously to life and property than a hundred railway accidents. The railway engineer has no motive to be criminally reckless; on the contrary, his life, limb, reputation,

and income depend upon the faithful discharge of his duty, but the law holds him to a strict reckoning. On the other hand, the agent is offered a bounty for criminal recklessness. He commits an act which results in crime and disaster, and the law not only exonerates him from all responsibility, but encourages the fire insurance companies to offer the temptation which creates an annual destruction of life and property compared with which the loss from railway disasters is insignificant. If the statistical estimates of fires originating from moral hazard are within gunshot of the truth, the American people pay from twenty to forty million dollars per annum for fires resulting in no small part from ignorance or criminal carelessness of fire insurance agents. The temptation which creates this carelessness is the commission paid without regard to the character of the service, and the measure of this temptation is the size of the commission."

The race for volume of business has, without doubt, induced many companies to appoint persons to agency positions without regard to more than a single consideration, namely, Does he control or can he secure certain lines of insurance? As a matter of fact, most companies in the past have been operated upon the theory that each must be represented by an agent in every town or city, whether or not there was any demand for increased insurance facilities or whether a competent agent could be found. In the most insignificant towns the strife of competition forces the companies to push their way into an existing agency, if possible, or if this cannot be done, to appoint a new and ignorant agent to compete in an overdone business.

We know of no other business which is or could be done in this manner. Probably the system itself is wrong, but if so, it is not likely to be abandoned, and the only possibility lies not in doing away with the system, but in some modifications and restrictions which still permit its existence but eliminate some of its opportunities for harm.

The local agent is the man who causes the company's liability to attach; he accepts or rejects the risks and formulates the written part of the policy contract. Upon the agent's judgment, experience, skill and honesty depend in a very large measure the rates, the character of the business and the success or failure of the companies he represents.

The home or department offices are remote from most of the business written, inspections of necessity are infrequent and then do not take into account the many local and purely personal considerations which contribute to differentiate between "good" and "bad" fire risks. These distinctions, in the main, are impossible to home office inspectors, but easily within the knowledge of the local agent. If he is skillful and honest he is the one individual who stands between the companies he represents and the dangerous risk and the careless or dishonest insurer. The agent may be naturally honest, but no man is born with skill and experience and no man should be permitted to acquire these at public expense.

It is indisputable that the local agent is the most important personal influence in the reduction or increase of fire losses and consequently the insurance cost, and the need is for men of character trained in the business, who know what sound underwriting means to the entire public, and who realize their personal responsibilities. Ignorance has no more place in the fire insurance business than in any other activity, and dishonesty has no place anywhere. Under the present system no qualification, training or experience are necessary to any agency appointment. Indeed, the agent is licensed at the request of the company—not at his own, and while no doubt the companies prefer experienced men and secure them when possible, the fact remains that thousands of agents are appointed annually who have little or no conception of their power or responsibilities. State supervision of agents might not make them honest, but certainly could better their mental and moral qualifications and in a measure remove the temptations which so often lead them to forget the best interests of their companies and the community they serve.

Nearly every general agent and company officer agreed from the witness stand that the present system increased fire losses, was wrong and ought to

be corrected, but expressed the view that very likely no correction was possible without some action by the State. No "bad" risk was ever written until some agent could be found who, through lack of intelligence or integrity, was willing to write it. The State should demand that his contribution to the fire waste be checked and if possible eliminated. The honest and careful insurer should not longer be penalized by his criminal or careless neighbor.

Nearly every trade or profession requiring any degree of skill or amount of information is now required, in almost all States, to present its members for examination, and applicants must satisfy the State of their fitness for the business in which they propose to engage. Why should not this be required of fire insurance agents? Agency qualification would largely do away with the part-time man and the agent who was appointed only because he could secure a certain line of risks by reason of relationship or business connection, and this variety of agents would be replaced by men who knew something of the business. Such a law would mean real insurance agents—not a lot of company appointees with whom fire insurance is only a side issue. Greater efficiency in this branch of the fire insurance business would, in our opinion, have an early and appreciable effect upon the fire losses and a corresponding result in premium reductions.

What we have said concerning the qualifications of local agents applies with equal or even greater force not only to brokers, but to special agents who represent their companies in the field. The legitimate duties of special agents are to appoint and educate their companies' agents, inspect its business, etc., and in the honest performance of these duties by capable special agents there is nothing inimical to public interests, indeed their work if well done is absolutely necessary and highly beneficial, but some of these men are entirely unqualified, both mentally and morally. They can rise to no higher conception of their duties than to regard themselves as drummers for the sale of their company's policies and their energies are devoted exclusively to the increase of its premium receipts, regardless of the quality of the business or the dishonest discrimination necessary to secure it. Always ready to extend favoritism to agent or assured, regardless of sound underwriting principles, they take away all incentive from property owners to make their risks less dangerous to the community, and thus effectually thwart every effort to reduce fire waste by the improvement of structure and occupancy. Some of them travel from place to place educating their agents in questionable methods, stirring up strife which may embroil all the agents of a town or city, and stirring up demoralization wherever they go by breaking down every standard and landmark of their own business and every influence that tends to reduce the fire waste of the communities they visit. They are more dangerous than local agents in proportion to the territory covered by their jurisdiction.

Local agents, brokers and special agents represent the business-getting end of the business, and a safe standard of character and conduct would tend to stop the spread of the offensive features of commercialism which have done so much to bring fire insurance into disrepute.

RATE MAKING.

Having considered the outgo of fire insurance and the economic possibilities that would result from improvement in the physical hazard of risks and the character of agents, brokers and field men, who so largely constitute the business seeking or commercial side of the business, we will now turn our attention to the basis schedules and local tariffs which are the instrumentalities for apportioning the fire tax of the country. If the margin of profit on the sales of indemnity as a whole is so small that there is no room to reduce this tax, except by reducing fire waste and the expenses of the business, or, on the other hand, by making the deficit good out of the cash assets of the business, it is in order to inquire whether this tax

is equitably spread over the insurable values of the country. Any brief and general answer to this question would necessarily be partly true and partly false, for from one point of view the answer would have to be yes, and from another no.

Fire insurance regarded from its commercial side reveals a good many of the objectionable characteristics, while regarded from its other side, it has many of the virtues to be commended. No one can visit the fire patrol stations maintained by the companies in our large cities without realizing that they are as important and beneficent in their way as our government life saving stations. The saving of property through patrol service accrues to the public in lower fire waste and lower rates. The same feeling of admiration cannot be withheld after a visit, such as the members of this commission made, to the laboratories maintained by the fire companies, where experts of the highest grade are constantly engaged in investigating every tangible feature of fire hazard. These laboratories serve a useful purpose and in their way are as directly in the interests of the public as our great endowed hospitals for the investigation of malignant diseases. The National Fire Protection Association, composed of trained experts who are graduates of the leading technical schools of the country, is doing a great and useful work in coöperation with national associations of architects, engineers, builders, etc., in the study of fire hazard as found in actual risks in all parts of the United States, and in the work of standardizing every important elementary feature of hazard, and the testimony of Mr. Merrill upon this subject may be read with very great profit (Record Vol. 2, p. 198). The National Board, which is the recognized statistical organization of the industry, is investigating the phenomena of the fire insurance business through comparative and statistical methods, and in addition is performing an invaluable work in investigating municipal protection in large cities, also in tracing out and prosecuting incendiarism, to say nothing of other equally important services. Salvage associations are maintained for the economic handling of goods damaged by fire, and adjustment bureaus for the uniform economic and equitable treatment of losses.

These things one and all are for the public good and it would be unjust to withhold our commendation of the activities found on this side of the fire insurance business. A narrow view of the obligations of fire insurance might contend that the only duty of the business is to take fire waste as it is and charge the public for indemnity what it may be worth, that that it is no more the moral duty of fire insurance to teach the public how to reduce fire waste, and thereby cut down the income of the business, than it is for doctors to teach the people to be healthy or for lawyers to teach them how to avoid litigation. It must be said for this side of fire underwriting that it appears to have done its whole duty in the face of widespread misunderstanding and misconstruction of motives, in a fashion that cannot truly be called other than public spirited. Thousands of broad-minded fire underwriters in all branches of the service, in all parts of the country, and at great personal sacrifice, are and long have been performing an important public service in the conservation of life and property and the development of their business in its efficiency and economy of service to the public. It would be dishonest on our part to withhold this plain statement of the truth.

Among these services perhaps none is more important, immediate and widespread in its effects than the work of measuring fire hazard in order to apportion the fire tax among property owners. This work, popularly known as fire rating, probably costs the companies about two million dollars per annum, and the responsibilities and expenses are by no means shared by all companies. A large number of stock companies and practically all the Lloyds, Mutuals, individual and reciprocal underwriters, indemnity exchanges and other similar organizations have contributed nothing to the work, and we think have done much to make the measurement of fire hazard worthless and by criticism and possible misrepresentations, much to bring it into disrepute. No function performed by fire insurance has been so maligned and

resented by the public as rating, which has been interdicted under heavy penalties in many states. The establishment of a common system of measurement seems to have been regarded by legislators as *prima facie* evidence of a trust, and nothing is more common than public references to the great fire insurance octopus. In the popular imagination, fire rates are arbitrarily made to extort from the public all the traffic will bear through secret conclaves and star chamber methods on the part of company officials. Testimony produced before the commission reveals the following facts:

The instrumentalities of measuring fire hazard, as before stated, consist of what are known as basis schedules and local tariffs. Basis schedules embody an analysis of hazard into its elementary parts and the hazard of each risk is the sum of the hazard of its parts as found in its structure, occupancy and exposure, as modified by the protection of municipal or private fire departments and water supply. When the rates of all risks in a town have been figured out by the basis schedule they are then arranged by street or block number and published in a book known as the local tariff of the town rated. The actual work of figuring out the rates and publishing local tariffs of all towns and cities in each state is now largely performed by what are known as independent state raters, who publish and sell their local tariffs to subscribers. These men have been before us and testify that they are not connected with any company or set of companies. They are simply experts in measuring hazard who sell their publications to those who choose to buy. It will be seen from this that local tariffs are simply the result of the application of basis schedules, and it is in these and their manner of construction that we must seek for the basic facts of rate making. As we have shown, the publication of these basis schedules has produced rates that have left an aggregate net profit on all premiums not over $2\frac{1}{2}$ per cent for any ten-year period. It will not be contended that this profit on the sales of indemnity is exorbitant; in fact, it is so close to the dead line of cost that rates as a whole will bear no reduction unless a corresponding economic reduction can be effected in the two elements of outgo; that is, losses and expenses. If rates produced by these basis schedules are not too high as a whole, the next question that arises is, Do they apportion the fire tax equitably among individuals, property groups, towns, cities and the several states? This problem of apportionment, it appears to the commission, presents many phases and innumerable difficulties. As a matter of fact, it has been the study of the best minds in the business ever since fire insurance took its place among the important activities of civilization. Fire rating as it exists is the result of a long evolution, in which close reasoning has had to contend with selfish disturbing influences from the beginning. It has steadily increased in complexity, until today it is not understood by underwriters generally, or at least they do not agree upon its fundamentals. The work of constructing basis schedules, instead of being performed by secret conclaves of underwriters themselves under star chamber methods, as the public has been led to believe, appears from our testimony to have passed out of their hands almost entirely into the hands of trained experts. The testimony shows that fire companies have little or nothing to do with the construction of schedules. The schedule maker in fire insurance today occupies a position analogous to that of the actuary in life insurance. He is expected to deal with fire hazard by analysis and classification of its elementary parts. There is no room whatever for selfish personal influences to participate in his work. He deals with such things as the classification of municipal protection, building materials, height, area, wall thickness, parapets, floorway openings, flues, classified occupancy, analyzed exposure, and standardization of things too numerous to mention, any and all of which may appear in any building. Discrimination or favoritism in the construction of basis schedules appears impossible even if the motive existed. During recent years the measurement of fire hazard has received the benefit of more exhaustive study than at any time in insurance history. New theories have sprung into existence and have been found to survive the test of actual use. The highest scientific authorities have been consulted in regard to the fundamentals of

measurement and classification, and it seems susceptible of proof that fire insurance today stands in the forefront of modern activities in its successful efforts to make its measurements conform to the demands of strictly scientific method.

So far as the making and application of basis schedules is concerned, we find little or nothing to criticize, for in every respect this work seems to be entitled to be grouped with the laboratories, fire patrols, salvage bureaus, national fire protection and statistical associations, etc., as a beneficent manifestation of the business, for under the application of these schedules every man may be said to make his own rate, and in every direction it is possible to find improvements of hazard produced by schedule rating. The suppression of this work in many states is, we believe, a mistake based either upon prejudice or a misunderstanding of the facts. We have been unable to find any general or widespread public prejudice against schedule rating except as encouraged by competition of insurance activities that pay no taxes and transact fire insurance as a gambling enterprise, reinforced by a few large property owners, who appear to resent the necessity for paying their just share of the fire tax. The question then arises, Where does the discrimination come from that is complained of and which very likely induced the resolution under which this commission was appointed? This is answered by the plain facts. Discrimination does not exist because of schedule rating, but in spite of it. It comes from the commercial end of the business, which is always ready to destroy method and system for selfish ends. In this connection it is proper to look upon schedule rating, not as a work completed, but as a work still in process, in which the numerous and subtle problems that are constantly arising can only be settled by degrees as the various shifting factors of hazard come to be better understood. New elements and new combinations of the elements of fire hazard are constantly making their appearance, and these can only be met and studied one by one, until they are understood and properly provided for. The business has been confronted with an unusual number of these new problems during recent years, because of the growing scarcity of lumber, which on the score of economy has compelled the public to resort to other building material. Among these new structures we find the modern steel construction building, reinforced concrete buildings, cement block buildings, tile buildings, etc., and in addition to these must be added the widespread installation of sprinkler systems and fire alarm service, which are making important changes of hazard that can only be measured when their nature and influence become understood. Schedules have been provided for these new combinations of hazard, but not such as are generally acceptable, and it will take time to evolve a system for each that will be generally approved. Until this time more or less discrimination in estimating these new untried hazards must unavoidably exist. We will now discuss discrimination as found in old and well known forms of hazard, where there seems to be no reasonable excuse for its existence.

DISCRIMINATION.

It has been before intimated that the principal purpose of this report is to call attention to some of the inequalities and inequities which are found in the fire insurance business, as shown by the testimony we have taken, and finally to suggest what appear to be appropriate remedies.

The chief of these evils is discrimination, and in some form it appears to have found its way into every phase of insurance activity.

It is not impossible that, from the very nature of the business and the conditions under which it has been built up in this country, discrimination is inevitable.

Until very recent years our entire commercial structure was built upon the familiar maxim, "competition is the life of trade."

Fire insurance has been no exception to the general rule, and there has always been a very large class of companies and individuals willing to engage in any sort of a race for business which promised even a temporary

advantage. The recent and general economic awakening has served to reveal the fact that competition is not the life of trade, but more frequently the death of it. Discrimination has run riot in our civilization because we were all nursed in the belief that "competition is the life of trade," without suspecting that, like most things, competition is a mixture of both good and evil. The competition which comes from a spirit of emulation and the desire to render better and more efficient service is in all respects good, but the competition that causes cut-throat strife in the effort to down each other is vicious. Today the world stands appalled at the revelations in the press and courts of our country of the iniquitous results of unrestrained competition. Out of this agitation new, and it is hoped saner, theories are coming to the front. Society is an organism which is beginning to develop what may be termed self-consciousness and recognize itself and its parts. It is beginning to realize that each of its various organized industries is a bodily organ intended to serve the whole, and that if this organ fails to perform efficient service it must be put into proper working order or eliminated. Our maxim is to be changed to read, "Emulation in service is the life of trade," and it can hardly be doubted that this change will develop more desirable and public spirited citizenship than its predecessor, for competition is a term which comprehends discrimination as well as emulation in service, though the public has not as yet grasped this fact and is demanding things that are mutually contradictory.

Our statutory laws are beginning to impose severe penalties for all forms of discrimination without repealing existing laws which impose equally severe penalties upon every attempt to suppress or even ameliorate the evils of competition. This involves a direct contradiction in terms which has left all commerce in a state of bewilderment as to the real meaning of our laws. Meanwhile our court dockets are strewn with cases of the State vs. the railroads, merchants, manufacturers and the life insurance companies, for discrimination, while the same docket shows a long succession of cases of the State vs. fire insurance for its efforts to stop discrimination. The chairman of our Government Interstate Commerce Commission, appointed to enforce the Sherman and Interstate Commerce Laws, says publicly: "*It is out of the question to have the presence of competition and the absence of discrimination.*"

In all this turmoil of cross purposes and misunderstandings the word *Discrimination* has suddenly sprung into prominence as a comprehensive term for most of the evils that beset our civilization, but discrimination is as old as humanity and world wide; it is simply another name for human nature seeking its own through devious ways.

The Commission does not believe that legislation is a sovereign remedy for all economic ills, nor that any remedy suggested can do more when applied to fire insurance than help a little in the right direction, but that intelligent legislation can better the conditions, we are very sure.

It is charged that fire insurance is guilty of discrimination, and the charge is doubtless true, but it is not alone in this sin, and if it were to be stoned to death for its offense there would be considerable difficulty in finding some one without guilt to cast the first stone. During all the long period of vacillating and contradictory theories which have at least given us a true conception of the fallacy of the maxim endorsing competition, it must be admitted that fire insurance was a part of our civilization and shared in the evil as well as the good of its times, but it is worthy of note that fire underwriters claim that they were in advance of their day and generation in being the first to see the dangers and essential injustice of open competition,—that of all our modern activities fire insurance was first to formulate and apply schedule measurement in order that it might be able to sell its indemnity without discrimination, and that this was long before even the one-price system had made its appearance in business circles. It is true that these advanced views were not and as yet are not shared by all underwriters or by all forms of fire underwriting, for, as

before explained, there has never been a time when there were not underwriters and companies transacting business on the theory that discrimination was the life of at least their own trade.

PREFERRED CLASSES.

It is an interesting illustration of the general public indifference to the evils of discrimination which our laws are now treating as criminal offenses that the terms "preferred classes," "non-preferred classes" and "graded commissions" should have been so long used in fire insurance without the least attempt at concealment and apparently without the slightest conception that they were a public confession of discrimination. Several department managers and company officials, assured us from the witness stand that preferred classes really mean classes that are so exceptionally profitable to the companies that each company must pay the agent graded commissions if it expects to secure its share in the general scramble that appears to exist for a preferred position in every agency. In other words, preferred classes mean classes that are discriminated against, and graded commissions in like manner signify that higher commissions are paid for the more profitable classes that are discriminated against.

The testimony indicates that prior to 1900 preferred classes were generally understood to include dwellings, churches, schools and court houses, though in many of the southern states dwellings are not and never have been regarded as preferred. With the development of new heating, lighting and ventilating systems, churches, schools and public buildings have ceased to be generally regarded as preferred as to their rates, though as to the commissions paid they are still on the preferred list.

What is known as the graded commission scale in Union territory, embracing about twenty states, is 15 per cent, 20 per cent and 25 per cent for the so-called union companies, slightly higher for the so-called bureau companies, according to the desirability of the business at prevailing rates. A few years ago brick mercantile buildings (not their contents) began to attract attention and they are now treated as preferred in their commissions, though, as shown by the evidence of the State rater, there has been no change of their treatment in schedule rating. Churches, school houses and public buildings in the aggregate premiums they yield are comparatively unimportant classes, and in view of the fact that in their rating they are no longer considered preferred, as suggested by two witnesses, there would be little or no objection if they were taken out of the preferred class as to their commissions. These risks are now, as a rule, rated by schedule with more care than ever before and there is apparently nothing to criticize so far as their rates are concerned. This explanation is made to call attention to the fact that the so-called preferred classes, to all intents and purposes, are composed entirely of dwellings, and it is only in this class that we can look for important economic reform. Town dwellings in their property values and premium yield constitute probably the most important single class in the country. It is claimed, as before suggested, that there are over eleven million buildings in the United States, and if we exclude country property, it is possible that town dwellings would outnumber all the rest, and while as a class it is composed of small risk values, the entire premiums from dwelling property constitute probably one-fourth of the aggregate premiums of the entire country. Dwellings, as a rule, are less exposed to city conflagrations than other property, and though the rates seem low, they have yielded a larger, safer and more uniform profit than any other prominent class. On account of the small average value and premium of each dwelling there has never been any concerted effort on the part of dwelling owners for lower rates. In fine, the class that has yielded the largest and most uniform profits with the smallest conflagration hazard of any town business has paid its rates year after year without demur, though it is proper to state that dwelling mutuals exist in all parts of the country, which are found practically everywhere competing for this class. Many prom-

inent companies have taken advantage of this situation and made their start by purchasing dwelling risks through high commissions, and some of these companies are said to still retain a large share of this desirable class by the same means. Naturally, with their intrenched privilege, companies so favored are opposed to any reduction in dwelling rates or commissions. To this should be added the influence of a majority of local agents, who feel that the work of soliciting and collecting the premiums for dwelling risks is greater than with other classes and that there is no necessity or common sense in lowering the rates on a class where there is no demand for such action. On the other hand, many if not a considerable majority of companies, without what they feel to be their proper share of this desirable class, contend that both rates and commissions should be lowered because the dwelling class is responsible to a large extent for the constant upward trend of commissions and expenses, to say nothing of the fact that it has been the source of most of the friction in the business, as well as the source of most of the public complaint over the evils of fire insurance.

It is claimed by a number of witnesses that practically every attempt to lower dwelling rates has emanated from the companies instead of from agents, that the majority of agents uniformly and everywhere has been opposed to any reduction in either the rates or commissions on dwellings. In the so-called excepted cities commissions and brokerage on this class have reached unreasonable limits, and in the light of experience it appears that the business as a whole is helpless in its effort to overcome these selfish influences and that any reform must come through the aid of legislation. Justice to agents, however, demands the admission that their compensation should bear some intelligent relation to the actual labor they perform; that in the large cities, especially, the labor of securing dwelling business is perceptibly greater than in securing the mercantile and manufacturing risks; in fact, a number of agents testify, with the competitive conditions that exist, any company allowing its agents in these cities the same commission on all classes could not hope to secure its share of the dwelling business.

Two peculiar features are to be noted in the rating of dwellings in many states, namely, that no charge is made for the exposure from other dwellings and practically no allowance made for the protection of municipal water supply and fire department. It is doubtless true that the exposure that emanates from a dwelling is materially less than from other classes because of constant human presence and the greater probabilities that every fire will be detected at its start. When a fire is suppressed inside the building where it starts there is, of course, no exposure loss to neighboring buildings, and any influence that tends to suppress fires inside the buildings where they start necessarily reduces the exposure factor to a corresponding degree. In addition to this, agents claim that when they have to visit some suburb in order to measure the exposure of a dwelling risk, the expenses for car fare and time are frequently much greater than the entire exposure charge. It is for these and other reasons doubtless that the general discontinuance of the exposure charge from dwelling to dwelling is justified. On the other hand, the dwelling class seems clearly to be entitled to some scale of credits for municipal fire department protection, and it is not plain why the same dwelling rate obtains under all grades of municipal protection; in fact, it seems entirely unreasonable when we find that frame dwelling rates are 40 cents per annum everywhere in the State, with no charge for exposure and regardless of municipal protection, until we come to dwellings under the full protection of the Chicago fire department, where a rate of 50 cents prevails, with a liberal additional charge for exposure. This discrepancy seems to be all the more glaring in view of the high commissions allowed for dwellings in that city. It is very hard to escape the conclusion that owners of dwellings in Chicago are grossly overcharged. It is plain that this protection of dwellings from the constant presence of occupants is of equal value under all grades of protection and that every fire suppressed without the actual aid of the fire department reduces the protection afforded by the fire department correspondingly, hence a scale of reduction for fire department

protection smaller than that accorded to mercantile risks might be justified, but it is equally plain that this protection does not make the dwelling in an unprotected town as desirable as the dwelling under municipal protection, and there is no apparent reason why the dwelling class should not be scaled down according to its municipal protection; in fact, we believe that if this were done much of the friction, demoralization and injustice generated by this important class would be permanently cured, for it is a matter of common knowledge that competition for the dwelling class is most acute in the larger cities and towns. We have gone into the dwelling class at some length because of its importance and because discrimination against this class is most marked, and also for the further reason that most of the dwellings belong to those who should be favored rather than injured. The ordinary insurer with a small risk, producing an insignificant premium, does not know where to go for relief and couldn't usually reach the proper rating authorities if he knew where they were. The large insurer can usually take care of himself and does so, and this important and vicious form of discrimination has been found to impose a burden upon a class of insurers least able to bear it.

Dwelling rates in Illinois should be equalized, and if the insurance companies decline to do this, the State should compel such action. It must be borne in mind that the insurance authorities testify, the companies do not make their rates, but buy them of professional raters, that schedule or analytical rating prevails in Illinois, and that the schedules as yet do not apply to dwellings. Over the State at large the present rate of 40 cents made by the companies is a relic of the days before schedule rating was applied. In Cook county the agents, not the companies, make the rates, which may account for the 50 cent basis and the exposure charge.

Because of the peculiar and long standing conditions we have described, there has been a motive for discrimination and direct rate cutting, for dwellings are so simple in their hazard that no analysis is necessary, and since the exposure charge has been generally abolished the dwelling schedule in Illinois practically consists of the simple statement that all frame dwellings in the State outside of Cook county, not exposed by risks other than dwellings, are rated at 40 cents per annum. Inasmuch as dwellings are thus rated by a simple announcement, which cannot be dignified by the name of schedule, it is plain to be seen that discrimination is easily possible because it is an independent action made up without reference to any other schedule, and can be changed without bringing about the inconsistencies and even absurdities which would be produced by hasty changes made in other schedules.

We have a mass of testimony upon the subject of schedule rating and examples of its operation, and in other schedules we find painstaking analysis and classification of what the raters advised us are the main divisions of hazard known as protection, construction, occupancy and exposure. It does not appear from the testimony that the companies have had much of anything to do with the formulation of these schedules. It would require a long and tedious description to give an idea of the new theories of rating and the new schedules that are going into use in the business, but our examination has served to convince us that these schedules are being fairly and logically made without any apparent motive for discrimination—in fact, without much possibility of intentional discrimination, even if the motive existed. There is probably as little room for criticism in the modern theories and creative work of tariff construction as in any department of the business, though, of course, when tariff rates have been made there is room for endless discrimination in cutting the rates they have established.

So far we have described discrimination, actual and possible, connected with the construction and application of schedules, as well as from individual rate cutting on the part of companies, field men and agents. This individual rate cutting may be through a rebate of agent's own commissions without the knowledge or consent of the company, or the agent may

directly cut a rate or rates with the full knowledge of his principals. Again, an agent may, with or without the knowledge of his companies, discriminate through any one of a number of evasive means known as the "tricks of the trade," which are far too numerous to describe. Our task of describing the various ways through which discrimination is possible would not be complete, however, without calling attention to some very important forms of discrimination which have nothing whatever to do with schedules or their application. A recent authority upon schedule rating advises us that "like all other forms of measurement, the measurement of fire hazard is based upon standards and there is probably no other system of measurement which requires so many standards as the modern basis schedule."

It seems to be a fact that in spite of the numerous standards found in basis schedules, these standards are not provided for two things that are prolific sources of injustice and discrimination.

One of these is a standard ratio of insurance to value of property insured, and the other a standard term for which insurance is to run.

The discrimination resulting from the absence of these standards manifests itself in what is known as blanket insurance and term rates. Taking up the last mentioned first, we find that it is the common understanding that the rate named in every tariff is an annual rate, unless otherwise stated. From the early days of the business, however, it has been an established custom to insure dwellings, churches and public buildings at two annual premiums for three years and three annual premiums for five years. During recent years this usage seems to have extended to many other classes, in some of these classes the scale being the same as for dwellings; in others, two and a half premiums for three years and four premiums for five years; while on still other classes the full annual premium is exacted without any concession when written for more than one year. If there is any reason in allowing a concession for term rates, it would seem to lie in the present value of the cash premiums for interest bearing purposes, as compared with premiums paid at the beginning of each year of the term. When the premiums for a term are paid in cash the company has the advantage of these premiums in the event of loss. There is also a supposed saving in the expenses of soliciting and issuing a policy each year. It is also a fact that the convenience of the public demands three and five-year policies, and that each of the reasons stated is valid in a way, but none of them justifies the fact that there are three different scales of term insurance in force when the same reasons equally apply to all classes. The existence of these three scales seems to be simply one of the manifestations of the so-called preferred classes.

Many kinds of property are not entitled to term insurance because of flimsy construction, lack of permanency, etc., and the companies are clearly entitled to exclude such property from term rates, but if rates are apportioned to hazard there cannot consistently be more than one scale of allowance for term risks. When this scale offers too large a reward for the use of money it is taken advantage of by wealthy property owners to the disadvantage of the man whose limited means compel him to live from hand to mouth. There is the same disadvantage that exists between the man who can afford to lay in his winter supply of coal in the summer and the man who can afford to buy only a basketful at a time. If a uniform scale of two and a half premiums for three years and four premiums for five years could be universally enforced it would cut off a large amount of discrimination, the benefit of which accrues entirely to the man who is in better financial position than his poorer neighbor.

The other missing standard, co-insurance, is even more important—in fact, it may be regarded as the most prolific source of the most objectional discrimination found in American fire insurance. It is a fundamental fact that every rating schedule must be constructed upon the assumption that all property should be insured for some uniform ratio of its value—in other words, a standard ratio of insurance to value is as necessary to prevent

discrimination as any other standard. It is immaterial what this ratio may be, provided it be a uniform standard and generally observed. If people generally insured their property for only one-fifth of its value the schedule would apply as justly in establishing the rate of one risk compared with others as if all property were insured for four-fifths of its value, but in the nature of things all standards must be arbitrarily established, and the commission is advised, by a common understanding among underwriters, the rate named in tariffs, in the absence of instructions, is supposed to be based upon 80 per cent of insurance to value. This simple and easily understood fact, however, is complicated by the wide range of probable destruction found in property. This range depends not only upon the nature and location of the property itself, but in the way the policy is written to cover it. Some property by its nature or location is not liable to total destruction by an ordinary fire; on the contrary, any probable loss would be a very small ratio, in some cases not even 10 per cent of its value. This fact is taken into account in schedules and the rate is correspondingly low because of the probability of only partial destruction, but these conditions afford no justification for a smaller ratio of insurance to value. Owners, however, are quick to see the bearings of the question and eager to secure the double advantage of the low rate and small proportion of insurance to value. This has produced a constant pressure for advantages in the ratio of insurance to value, for it is possible to secure as much advantage in this way as it is through a direct cut in the rate. This makes possible a double opportunity for advantage, for, after the tariff has made a low rate because of the liability of the property to only partial destruction, the owner by sharp bargaining secures first a substantial reduction in his rate, and, second, a policy that spreads its protection over values largely, often many times in excess of the indemnity he pays for. This spreading of insurance to cover values is possible in so many ways, so many directions and to such an extent that in order to make it plainer we will describe a few of its manifestations. Steel construction or other form of so-called fire-proof building is liable from ordinary fires to only a small partial damage, and because of this its rate is very low. Owners of these buildings are naturally averse to paying for an amount of insurance that is *prima facie* in excess of any probable fire loss, for they will not realize that this fact was considered when the rate was made. In the Baltimore conflagration one building worth about a million dollars was found to be insured for only \$5,000.00. In other words, each dollar of indemnity covered \$200.00 of value. In an ordinary fire originating in the building itself the owner was able to see that his insurance was ample to cover the probable loss, for he did not take into consideration the possibility of total destruction by city conflagration. What he figured on was that he could purchase all the protection he needed on about one million dollars of value at an annual expense of about \$12.50.

In this kind of blanket insurance no special phraseology in policy is necessary, as with other forms of this evil which will be described. The company simply issues a policy for a stated amount not in excess of its line limit, with a permit for other insurance. It has no means of knowing how much other insurance is carried. We find this kind of blanket insurance especially in use in cities under high grades of fire department protection, for the better the department the less the probability of total destruction. In towns with little or no municipal protection the probability of total loss is so great that property owners need no urging to keep their property insured for 80 per cent or even more of its value. On the other hand, people in cities will not, or at least do not, count on the dangers of conflagrations. They see the fires suppressed in dwellings and small shops in their neighborhood year after year with small partial damage to the contents and frequently only nominal damage to the building itself. For this reason they can see that they can economize by buying only enough insurance to cover their small probable loss. The record shows that it is not unusual to find property in the larger cities insured for not over one-fifth of its value, and the burning of the

contents of a single room may cost the insurance company a total loss under its policy. For this reason even frame buildings and their contents are often found insured for but a small fraction of their value.

Another equally important phase of blanket insurance is found in property that is so divided or scattered that there is no probability of its being all destroyed by fire. It would in theory be possible for a company to issue a \$5,000.00 policy covering every building and its contents within the corporate limits of the city of Chicago, but it would be a bad bargain for the company, because it would certainly have a total loss the day the policy was issued. This hypothetical case could not, of course, happen; but it is what happens constantly in a modified way in blanket insurance of this kind. A manufacturing or mercantile establishment may be located in several brick buildings separated by spaces, or in several divisions of the same building, separated by solid parapeted fire walls, with what are known as standard fire doors. In either event there is little or no possibility of a total loss. The personal property in the buildings is passing back and forth from one building or division to another in process of manufacture or sale, and for this reason it is impossible for owners in case of fire to tell what values were in one given building or division; hence, the owner's necessities compel him to ask for blanket insurance covering all his property, wherever it may be in the several buildings or divisions. This is a reasonable demand and can be met by the companies without discrimination or hardship to anybody by the simple plan of attaching an 80 per cent co-insurance clause to their policies. This clause provides that the assured shall maintain insurance for 80 per cent of the values insured or must be a co-insurer for any deficit between the total insurance and 80 per cent of the value. If the owner complies with his contract the adjustment of his loss is not affected in any way. We might go on to point out the ramifications of blanket insurance indefinitely, but the cases instanced will serve to show the nature and extent of the discrimination it produces. We have discussed co-insurance at some length because the fact should not be overlooked that this discrimination is invariably in favor of the larger cities and larger property owners, who in this way are able to shift a part of their fire tax upon the small towns and small property owners. It will further be noticed that this discrimination permeates the entire fabric of the business and seems to be an evasive and hidden form of discrimination that does not, like rates, attract public attention. It affords a rich field for the exploitations of corporations, trusts and large property interests in shifting a considerable portion of their taxes upon the general public. In the past these interests have secured the enactment of anti-coinsurance laws in many states, which effectually prevent the companies from protecting themselves and their other policy holders by a general enforcement of co-insurance; and the great property interests are today beneficiaries of this obscure form of discrimination which would subject them to heavy fines under our national and State anti-discriminatory laws if accepted, even without solicitation, in their railway rates. The entire evil of blanket insurance might be cured by a law requiring every policy to provide that if the owner does not keep his property insured for 80 per cent of its value, he shall be a co-insurer for the deficit. This problem was long ago solved in all European countries, either by statutory requirement or by universal usage of the fire companies, and in America, co-insurance has always been a condition of marine policies.

UNLICENSED UNDERWRITING.

Earlier in this report we suggested the thought that regulation of fire insurance or any other branch of corporate activity without affording at the same time proper protection, would be an act of oppression rather than intelligent statesmanship.

In the consideration of unlicensed fire underwriting concerns and their relation to the business of fire insurance generally, this thought should be kept constantly in mind.

We have, operating in the State of Illinois, a great variety of unlicensed forms of fire insurance, foreign mutuals, Lloyds and individual underwriters, domestic and foreign, inter-insurers and reciprocal underwriters, all acting without supervision or warrant of statutes, and all competing with the licensed companies.

The practice of these unlicensed activities is to select only certain specific risks or classes of property, leaving the bulk of the hazard to be covered by the regular or so-called stock companies.

These unlicensed organizations are subject to no supervision whatever; most of them cannot be sued in the State for lack of any person upon whom service of process may be had, and none of them pay any fees or taxes.

It may not be possible or desirable to forbid these organizations or persons admission to the State, but justice demands that the law abiding, tax paying companies be protected by law against present discrimination against law, order and system in favor of persons and organizations operating in defiance of law.

State supervision of the business of fire insurance is only possible or lawful upon the theory that it is a public service. Sound considerations of public policy demand such laws, and it is difficult to understand why any particular variety of companies, or scheme of doing fire insurance business should be exempt from legislative attention.

No form of fire underwriting should be permitted within the State except under supervision of the Insurance Department and in full compliance with proper laws enacted for its control.

Every company, association or individual should pay proper fees and charges, make reports for public information and pay taxes.

At present we are convinced that large sums of money are sent out of the State annually for insurance premiums which have made no contribution of any kind to the State, to concerns which by reason of this fact are able to furnish indemnity cheaper than licensed companies who comply with our laws and contribute to maintain our institutions.

We should not longer penalize those corporations which observe the law, submit to supervision and increase our revenues, for the benefit of those to whom violation of law appears a virtue. Sound indemnity is the first consideration. The original function was, and the chief function of State supervision still is, to insure this; and the State will not perform its full duty until it writes upon the statute books such enactments as will enable the Insurance Department to obtain and furnish insurers complete and detailed information as to the solvency and reliability of every company, association or individual selling fire insurance within its boundaries.

Believing, as we do, that every form of fire underwriting should be done only upon compliance with appropriate law and under State supervision, we report as a part hereof, draft of a bill, the enactment of which we recommend to the General Assembly.

SURPLUS LINE LAW.

The General Assembly in 1903 passed what was known as the Surplus Line Law, which provides in substance that the Insurance Superintendent may license certain surplus line agents who shall be authorized to procure fire insurance from unauthorized companies upon affidavit that the insurance desired cannot be procured of licensed companies.

This law has been upon the statute books of this State for something like seven years, and it is believed has been very frequently violated and is practically a dead letter, because there is no penalty whatever provided for the violation of its provisions, except the revocation of the license of the agent.

It is not desired to take from any citizen of the State of Illinois the opportunity of procuring surplus insurance in cases where the desired amount

cannot be obtained from regularly licensed companies; but this should be done only under proper restrictions, and the penalty for making a false affidavit should be as for any other perjury committed in the State, and the violation of the Surplus Line Law should also be punishable by a heavy fine.

CONCLUSION.

At the beginning of this report we stated that the purpose of any recommendations we might make would be the conservation and increased efficiency of the fire insurance business, in rendering the character of service demanded by public welfare, and to secure as far as practicable equity without discrimination in the apportionment of the tax necessary for fire insurance to perform such service, at rates as low as would justify capital in not deserting the business. This purpose has accompanied our investigation from beginning to end, and out of the mass of evidence gathered we reach the following conclusions:

The great massed insurable values of this country exist in our towns and cities, where they are liable to be swept away by conflagrations which vitally affect every member of the local community; in a lesser degree, every citizen of the State; and in city conflagrations, every American citizen. The interests of individuals sink into insignificance in comparison with the interests of entire cities and commonwealths. The spirit of all law, natural and statutory, is that the rights of species and communities shall take precedence over the rights of individuals. Hitherto the effort of State fire insurance legislation has been to cater to the individual at the expense of the community, and this, without doubt, has created the worst of the evils found in fire underwriting. The paramount duty of fire insurance, in this land of the sweeping conflagration, is to protect *communities* as well as individuals, and only that form of insurance appears adequate to the task that is fortified by cash assets and conforms to every legal requirement of the States. Other forms of insurance are a mere incident to the business as a whole. They do not serve the community, but simply serve selected individuals or groups of individuals. They render not a common service, but preferential service to a favored few. Their names are seldom seen in the records of our great conflagrations. They ignore the State and contribute nothing to its revenue. Their tendency is to incite discrimination, thwart attempts to establish order and system, and excite public sentiment against forms of insurance done in compliance with and in recognition of the law.

In fire insurance regarded as a whole this is the greatest and most remediable evil. When legislators are able to see that it is the interests of great communities that are at stake, rather than the interests of a few individuals or groups of individuals seeking preferential terms, they will be able to see that their first duty is to protect that form of insurance activity which answers the economic need. Protection to such insurance and to law abiding companies is the State's first duty, for with adequate protection the business would need little regulation, and that little it could best establish itself, if permitted reasonable discretion to act under the eyes of the State. Regulation is a resource that the State always has at hand, and it cannot intelligently determine how much regulation may be necessary until it has given underwriters an opportunity to regulate themselves. England and continental nations have comparatively few laws relating to fire insurance, and very little regulation, yet these countries enjoy very much lower rates and better conditions than are found here. It is charged that this country is burdened by too much law, and there is certainly ample room for this complaint when the fire insurance codes of the several states are considered.

The function of law is not obstruction, but assistance. The law is made for man, not man for the law, and no regulation should be proposed by this commission or enacted by the General Assembly which would not certainly have as its effect the betterment of the fire insurance business, its conservation and increased efficiency.

It is probable that a really exhaustive investigation of any one of our leading industries would have brought to light irregularities and discriminations as glaring and unjust as we have found in fire insurance, but we are confident that in no other business are these irregularities and discriminations so obscure, perplexing and numerous. The State cannot regulate all these more or less discriminative manifestations of the business by a single sweeping statute aimed at discrimination, for at every turn the word discrimination would need to be defined. Discrimination cannot discriminate except from some established and well defined law, custom, ideal, measure or standard. If we are to interdict discrimination, common sense suggests that our definition of the thing that is to be held inviolate shall be so plain that it will leave no room for doubt in the mind of the ordinary man. The irregularities found in a business as many sided as fire insurance are so numerous, obscure and changing that legislative ingenuity cannot provide for them through the limited provisions of statutory law. Any attempt to do so would leave our legislators no time for other and more important matters, but the difficulties do not end here. Our evidence shows that fire insurance is interstate in its nature. It is a business founded upon averages and distribution, and neither averages nor distribution can find room to function properly within the narrow confines of a single state. Every attempt made in one State to clip or prune natural manifestations of the business has an effect in other states. There is an unwritten law of physical as well as moral reciprocity that bonds all states together, whether they know it or not. The state that attempts to establish rates for fire insurance must definitely state its intention as to the distribution of city conflagrations, else in a short while other states, under their idea of reciprocity, will notify the companies to take their choice of withdrawing from their borders or from the State that refuses to admit that "there are others." This is a vital question in this State, where about half the values of the entire State exist within the corporate limits of one city. When the Chicago conflagration occurred in 1871, all the other states responded readily to the call when fire insurance doubled the rate from one end of the land to the other. Can the great State of Illinois afford to forget this historic fact and say we will not let the companies raise our rates because of a Baltimore or San Francisco? We still live in a glass house, for half the insurable values of the State are still found in one city, and this city may be the next victim of the fire fiend.

Regulation by the states of late years has more and more come to mean the regulation of rates, for in fire insurance all roads lead ultimately to the rate question, and by the terms of your resolution providing for our appointment as a commission we are asked to report our judgment as to "the advisability of making a law regulating fire insurance rates in this State." While many states have enacted anti-compact laws forbidding the companies to coöperate in the making or maintenance of common rates, so far only three states have really undertaken to regulate fire rates, and in one state the constitutionality of the law is already being determined in the courts on the contention of the companies, which is about as follows:

"The state has no power to regulate rates in any business, unless it is concerned with the public interest; and fire insurance does not come under this class, because the magnitude and extent of the business does not make it public within the meaning of the term; and, further, the requiring of a license by a state and supervision of the conduct of its business by the state under its police power does not make a business public. Distinction should be drawn between the common regulation of insurance which comes under the police powers of the state and regulation to which constitutional limitations apply. The fire insurance business does not come within the definition of a public use, the term public use being held to be dependent upon the right of the public to the use, regardless of the will or caprice of the person or corporation owning the property or conducting the business that comes within the meaning of a public use. Any one can engage in fire in-

surance, subject to the regulations prescribed by the state, and no citizen can demand as a right that an insurance policy be issued to him. The constitutionality of the rate regulating laws is questioned on the ground that they discriminate, in that they apply to incorporated companies and do not extend to individuals, partnerships or unincorporated associations engaged in a precisely similar business, and that they specifically except farmers' mutuals."

The commission does not quote from the brief in behalf of the insurance companies, desiring to be understood as entirely agreeing or disagreeing with the contention expressed, but because the position appears briefly and clearly stated and the question of state made rates is a very live and important issue just at this time.

Later herein we express our conviction that this State should not at this time attempt legislation of the Kansas variety, and the quotation above suggests some of the reasons for our conclusion.

Since the close of our testimony the attention of the commission has been called to the Nebraska law of 1909, fixing maximum rates for fidelity and surety companies in that state, and to the opinion of the United States Circuit Court for the district of Nebraska declaring the law unconstitutional and announcing the doctrine that the state has not the power to fix the rates to be charged by these companies.

We see no difference between the rates for fidelity and surety insurance and rates for fire insurance, and the laws we suggest, it will be observed, deal with the application of rates, not with their making.

The spirit of the laws of our several states governing fire insurance may be divided under three heads:

First—States that leave the business alone in its rate making functions, without either regulation or protection.

Second—States which have under the name of anti-compact laws interdicted all cooperation in the making or maintenance of common rates.

Third—States where the anti-compact laws have created such widespread discrimination as to produce a reversal in legislative theories and an attempt to cure the evils created by anti-compact laws through anti-discriminatory laws, which compel every company to file its rates and rules with the state and impose severe penalties for any variation therefrom; also giving the state the right to order changes in schedules and rates at its discretion. In one of these states the right to make schedules has recently been taken away from underwriters and the work of schedule making undertaken by the state. What may be the practical result or how long the state will be permitted to continue rate making without interference by the courts can only be conjectured.

In states of the first group demoralization and discrimination prevail, because of lack of protection against selfish interests, which are uncontrollable because of the legislative neglect that has left the business unable to enforce its own regulations.

In states of the second group discrimination and demoralization prevail, because underwriters are forbidden to maintain a semblance of either order or system, and the public dissatisfaction is so great that lawmakers are said to be earnestly considering the theories of the new anti-discriminatory laws, as an outlet from the unsatisfactory conditions produced by their anti-compact laws.

In states of the third group the anti-discriminatory laws as yet are an experiment. In Louisiana the law has just gone into effect. In Kansas it has been in force about eighteen months and in Texas about eleven months. We have examined the laws of Kansas, Texas and Louisiana, copies of which will be found in the record filed herewith, and it appears that in each instance the power is given the state, either directly or finally, to fix the rates.

In view of the fact that the constitutionality of state regulation of rates

is now being threshed out in the courts, and of the recent decision in Nebraska, there is little encouragement for the State of Illinois to follow their example and attempt by law to fix rates for fire insurance.

We are directed to report to the General Assembly our judgment "as to the advisability of enacting a law regulating fire insurance rates in this State."

We have assumed that *regulation* did not presuppose *making* rates by the State, and our investigation leads us to the conclusion that any attempt by the State to assume the function of creating or originating rates for fire insurance would be a serious mistake, both from the standpoint of practicability and of the constitutionality of a law for this purpose. We believe the State should not make rates, but certainly should supervise the rates after they are made. The insurance companies, by their representatives, have testified that the analytical system of rate making has been adopted by practically all licensed companies for Illinois and that schedule rating would in future prevail in this State.

We think this is a step in the right direction, and that there is much reason to believe this system will produce a nearer approach to an equitable and fair distribution of the fire insurance tax than has hitherto been known.

If schedule rating is as fair and impartial as claimed by its advocates and as it appears to be, its adoption marks an epoch in the business of fire underwriting.

If the schedules are fairly constructed by impartial, skilled and disinterested raters, the burden of fire insurance should be equitably spread, and each risk and class of risks bear a proper share of the load.

The State has a right to know that this is done, and should be able to command the means of knowing that the desired result has been reached; or if not, where the failure has been.

If every risk is to be rated by itself, the owners of property insured should be entitled to schedules upon individual risks, that they may know how the rate is built, what charges are made, what credits permitted, and what may be done to obtain still more favorable conditions.

Insurance companies by their own regulations are now furnishing these schedules to insurers upon request, but they should be furnished the State and the insurer as a matter of law, not as a matter of courtesy.

If schedule rating is to be generally applied, the State should provide by law that all property should be thus rated, not indicating what system should be used or schedule applied; but in general terms requiring every company to rate its risks and all of them by some system extending over the whole State.

In other words, insurance companies should so arrange their rating schemes as to produce uniformity.

The complaints which have been made to us have been chiefly against discrimination, and such complaints have been well founded and the evil complained of should be corrected. Let the insurance companies establish rates upon all classes of risks by schedules producing uniformity, and after such rates are fixed, collect them from all persons, upon all property in all parts of the State.

These schedules should by law be available to the State and the insurer upon reasonable request. It is agreed upon all hands that discrimination should be stopped so far as this can be done, and that the supervisory authority of the Insurance Department should be enlarged to include the execution of a law to accomplish this end. We have discussed at such length as appeared necessary the important factors which enter into the fire insurance problem, the abuses we find in the business and their causes.

Most of these abuses are functional, and not organic. They can be corrected without drastic legislation, because most of them are the result of ill advised and reckless competition, which those concerned would willingly avoid.

The duty of executing any laws enacted pursuant to the recommendations of the commission, is imposed upon the Insurance Department.

In order that this duty may be efficiently performed, sufficient appropriation should be made by the General Assembly to enable the Insurance Superintendent to secure competent help and for any general expense connected with any law enacted.

In accordance with the suggestions before made, we submit and recommend to the General Assembly for enactment the following measures:

(1) A bill regulating varieties of fire underwriting at present unlicensed and prescribing the conditions upon which they may do business in this State.

(2) A bill amending the Surplus Line Law by providing a penalty for violation.

(3) A bill requiring all insurance corporations, firms, associations or individuals to file with the Insurance Department, upon request, a copy of the schedule upon which rates are made, and upon similar request to furnish a copy of such schedule to insurers of particular risks. Providing, also, that all business done shall be upon a schedule of some character. This bill also prohibits rebating and discrimination of all kinds.

(4) We recommend that the General Assembly take under consideration the desirability of a revised building code applicable to the entire State.

(5) We further recommend that appropriate action be taken by the General Assembly, that the State of Illinois may be able to cooperate with other states in the formulation of a uniform fire insurance code.

We believe the vital question which the fire insurance business is called upon to solve is one of distribution—a fair and equitable apportionment of the twenty-five million-dollar burden constituting our annual premium charge. The State should insist that this tax be fairly distributed, and we believe to this end should require by law that the companies make public the basis upon which rates are made, and discrimination by agent or company should be punished.

Fire insurance is a business in which any form of discrimination has no place, a business in which there is no room for competition of the destructive kind, that favors specific individuals, risks, classes, towns or cities.

With the help of the State the insurance companies can apportion the fire tax fairly.

The State and the insurance business should cooperate in bringing about this desirable result, and we believe the measures suggested by this commission will contribute substantially to this end.

Respectfully submitted,

E. W. LYMAN, *Chairman.*
 GEORGE C. GILL, *Secretary.*
